

# **DG5000 Series Function/Arbitrary Waveform Generator Programming Guide**

This manual is for users who want to use remote commands to control **RIGOL** DG5000 Series Function/Arbitrary Waveform Generator. We assume that readers of this manual have read User's Guide for DG5000 and gotten familiar with the usage of the generator.

DG5000 Series instrument can communicate with the PC through USB, LAN and GPIB instrument buses. For the usage of each communication method, please refer to the User's Guide of this instrument. Users can use the SCPI commands to program and control the instrument, after the DG5000 Series instrument is reliably connected with the PC via one of the above-mentioned methods. All the command words are transmited to the instrument from the PC and identified as ASCII string to realize operation, control and secondary development of the instrument.

The following operations can be realized through programming:

- Set up the signal generator.
- Output waveform data from the signal generator.

# Introduction to the SCPI Language

SCPI (Standard Commands for Programmable Instrument) is a programmable instrument standard instruction set based on IEEE 488.2 and is usually divided into two sections: IEEE 488.2 Common Commands and Control Commands defined for SCPI Instruments.

Common commands, the syntax and semantics of which follows the provisions of IEEE 488.2, are defined by IEEE 488.2 and must be supported by the instrument. The common commands work independently of measurement and are used for controlling the reset, self-test and status operations. For more details, refer to "[IEEE 488.2 Common Command](#)".

Control Commands defined for SCPI Instrument are used to measure and read data, control the on/off switching and so on, involving all measurement functions and some specific functional functions.

The topics of this section:

[Syntax](#)

[Symbol Description](#)

[Parameter Type](#)

[Command Abbreviation](#)

 PREV

 NEXT

## Syntax

SCPI commands present a hierarchical tree structure and contain multiple sub-systems, each of which is made up of a root keyword and one or more sub-keywords. The command string usually starts with ":" , the keywords are separated by ":" and are followed by the parameter settings available, "?" is added at the end of the command string to indicate query and the command and parameter are separated by "space".

For Example,

```
:DISPlay:SAVer:HLIGHT:COLor <color>  
:DISPlay:SAVer:HLIGHT:COLor?
```

**DISPlay** is the root keyword of the command. **SAVer**, **HLIGHT** and **COLOR** are the second-level, third-level and forth-level keywords respectively. The command string starts with ":" which separate the multiple-level keywords. <color> represents the parameters available for setting, "?" represents query and the command string **:DISPlay:SAVer:HLIGHT:COLor** and parameter <color> are separated by "space".

"," is generally used for separating different parameters contained in the same command, for example,

```
:MMEMory:COPY <directory_name>,<file_name>
```

 PREV

 NEXT

# Symbol Description

The following four symbols are not the content of SCPI commands but usually used to describe the parameters in the commands.

## Braces { }

The parameters enclosed in braces are optional and can be ignored or set for one or more times.

For example,

[:TRACe]:DATA[:DATA] VOLATILE,<value>{,<value>}

In the command, the floating point voltage value in {,<value>} can be ignored or be set to one or more voltage values.

## Vertical Bar |

The vertical bar is used to separate multiple parameters and one of the parameters must be selected when sending the command. For example,

:DISPlay:SAVer[:STATe] ON|OFF

In the command, the command parameters available are "ON" or "OFF".

## Triangle Brackets <>

The parameter enclosed in the triangle brackets must be replaced by an effective value. For example,

:DISPlay:BRIGtness <brightness>|MINimum|MAXimum

:DISPlay:BRIGtness 10

## Square Brackets [ ]

The content (command keyword) is optional and will be executed regardless of whether it is omitted or not. For example,

[:SOURce<n>]:MOD[:STATe]?

Sending the following four commands would have the same effect:

:MOD?

:MOD:STATe?

:SOURce1:MOD?

:SOURce1:MOD:STATe?

PREV

NEXT

## Parameter Type

The parameters of the commands introduced in this manual contains 6 types: boolean, keyword, integer, consecutive real number, discrete and ASCII character string.

### Boolean

The parameter could be "ON" or "OFF". For example,  
:DISPlay:SAVer[:STATe] ON|OFF

### Keyword

The parameter should be one of the values listed. For example,  
[:SOURce<n>]:BURSt:MODE TRIGgered|GATed|INFinity  
The parameter could be "TRIGgered", "GATed" or "INFinity".

### Integer

Unless otherwise noted, the parameter should be any integer within the effective value range.  
Note: at this point, please do not set the parameter to a decimal, otherwise errors will occur. For example,

:SYSTem:COMMUnicatE:GPIB[:SELF]:ADDRess <integer>  
The parameter<integer> could be any integer within 0-30.

### Consecutive Real Number

The parameter could be any value within the effective value range according to the accuracy requirement (the default accuracy contains up to 6 digits after the decimal points). For example,  
[:SOURce<n>]:MOD:AM[:DEPTH]<depth>|MINimum|MAXimum  
The parameter<depth> can be set to any real number within 0-120.

### Discrete

The parameter could only be a specified value and these values are discontinuous. For example,  
[:SOURce<n>]:MOD[:STATe]?  
The parameter<n> could only be 1 or 2.

### ASCII Character String

The parameter should be the combinations of ASCII characters. For example,  
:MMEMory:MDIRectory <dir\_name>  
The parameter <dir\_name> is a character string.

PREV

NEXT

## **Command Abbreviation**

Since all commands are case-insensitive, you can use any of them. But if abbreviation is used, all the capital letters in the command must be written completely. For example,

:SYSTem:COMMunicate:USB:INFormation?

can be abbreviated to

:SYST:COMM:USB:INF?

 PREV

 NEXT

## Command System

DG5000 Series command system mainly contains the following types:

[IEEE 488.2 Common Command](#)

[COUPLing Subsystem](#)

[DIGITAL Subsystem](#)

[DISPlay Subsystem](#)

[MMEMORY Subsystem](#)

[OUTPut Subsystem](#)

[SOURce Subsystem](#)

[SYSTem Subsystem](#)

[TRACe Subsystem](#)

### Explanation:

In this command system, commands relating to parameter settings such as frequency and amplitude could have units. The units supported by each parameter and the default units are listed in the table below:

Parameter	Units Supported	Default Units
Frequency	MHZ/KHZ/HZ/UHZ	Hz
Amplitude	VPP/MVPP/VRMS/MVRMS/DBM (depend on the parameter currently set)	VPP/VRMS/DBM
Offset/High Level/Low Level	V/MV	V
Time	MS/S/US/NS	S
Phase	°	°
Duty Cycle/Modulation Depth and so on	%	%

- MHZ equals to mHz.
- MVPP, MVRMS and MV equal to mVPP, mVRMS and mV respectively.
- MS equals to ms.

### Note:

For the explanations of the parameter range in the commands, DG5352 is taken as an example in this manual.

NEXT

## **IEEE 488.2 Common Command Introduction**

IEEE standard defines the common commands used for querying the basic information of the instrument or executing basic operations. These commands usually start with "\*" and the length of the keywords of the command is usually 3 characters.

[\\*IDN?](#)

[\\*RST](#)

[\\*TRG](#)

 **PREV**

 **NEXT**

## **\*IDN?**

### **Syntax**

\*IDN?

### **Description**

Query and return the ID character string of the instrument.

### **Example**

Rigol Technologies,DG5352,DG53520002,00.01.07

 PREV

 NEXT

## **\*RST**

### **Syntax**

\*RST

### **Description**

Reset the instrument to its default value.

### **Front Panel**

Utility, System, Preset

↑ PREV

↓ NEXT

## **\*TRG**

### **Syntax**

\*TRG

### **Description**

Trigger the instrument to output a sweep or burst.

### **Explanation**

This command is available only when Sweep or Burst function is enabled (refer to the [\[:SOURce<n>\]:SWEep:STATE](#) or [\[:SOURce<n>\]:BURSt\[:STATE\]](#) command) and its source is manual (refer to the [\[:SOURCE<n>\]:SWEep:TRIGger:SOURce](#) or [\[:SOURce<n>\]:BURSt:TRIGger:SOURce](#) command).

### **Front Panel**

## **COUPling Subsystem**

[:COUPling\[:STATe\]](#)  
[:COUPling:TYPE](#)  
[:COUPling:CHannel:BASE](#)  
[:COUPling:PHASe:DEViation](#)  
[:COUPling:FREQuency:DEViation](#)

**↑ PREV**

**↓ NEXT**

## **:COUPLing[:STATe]**

### **Syntax**

```
:COUPLing[:STATe] ON|OFF  
:COUPLing[:STATe]?
```

### **Description**

Turn the channel coupling function on or off.  
The query returns ON or OFF.

### **Explanation**

The coupling function is only available when Sine, Square, Ramp or Arb (not DC) is enabled.

### **Example**

```
:COUP:STAT ON  
The query returns ON.
```

### **Default Setting**

OFF

### **Front Panel**

Utility, Coupling, Coupling

**↓NEXT**

## **:COUPLING:TYPE**

### **Syntax**

```
:COUPLING:TYPE PHASE|FREQ  
:COUPLING:TYPE?
```

### **Description**

Select the coupling type: Frequency Deviation or Phase Deviation.  
The query returns PHASE or FREQ.

### **Example**

```
:COUP:TYPE PHASE  
The query returns PHASE.
```

### **Explanation**

The coupling mark (a green symbol "\*") is displayed at the position of the current coupling type (Frequency or Phase).

### **Default Setting**

FREQ (Frequency Deviation)

### **Front Panel**

Utility, Coupling, Type

**↑ PREV**

**↓ NEXT**

## **:COUPLING:CHANNEL:BASE**

### **Syntax**

```
:COUPLING:CHANNEL:BASE CH1|CH2  
:COUPLING:CHANNEL:BASE?
```

### **Description**

Set the coupling base channel as CH1 or CH2.  
The query returns CH1 or CH2.

### **Example**

```
:COUP:CH:BASE CH1  
The query returns CH1.
```

### **Explanation**

Turn off the coupling function before executing this command.

### **Default Setting**

CH2

### **Front Panel**

Utility, Coupling, Base

**↓NEXT**

## **:COUPLing:PHASe:DEViation**

### **Syntax**

```
:COUPLing:PHASe:DEViation <deviation>
:COUPLing:PHASe:DEViation?
```

### **Description**

Set the phase deviation of phase coupling and the default unit is "°".  
The query returns the phase deviation value in scientific notation.

### **Example**

```
:COUP:PHAS:DEV 10
The query returns 1.000000E+01.
```

### **Explanation**

<deviation> is the phase deviation to be set and the range available is from 0° to 360°.

### **Front Panel**

Utility, Coupling, Type, PhaseDev

PREV

NEXT

## **:COUPling:FREQuency:DEViation**

### **Syntax**

```
:COUPling:FREQuency:DEViation <deviation>
:COUPling:FREQuency:DEViation?
```

### **Description**

Set the frequency deviation of frequency coupling and the default unit is "Hz".  
The query returns the frequency deviation value in scientific notation.

### **Example**

```
:COUP:FREQ:DEV 10
The query returns 1.000000E+01.
```

### **Explanation**

<deviation> is the frequency deviation to be set and the range available is from 0 Hz to 350 MHz.

### **Front Panel**

Utility, Coupling, Type, FreqDev

**↓ NEXT**

## DIGItal Subsystem

:DIGItal commands are used to configure the DG5000 Logic signal output module. Install DG-POD-A before using these commands.

[:DIGItal:CONFIG](#)

[:DIGItal\[:DATA\]](#)

[:DIGItal:INTERval](#)

[:DIGItal:LENGth](#)

[:DIGItal:OFFSet](#)

[:DIGItal:PATTERn](#)

[:DIGItal:PROTocol](#)

[:DIGItal:RATE](#)

[:DIGItal:STATE](#)

[:DIGItal:IIC](#)

[:DIGItal:PO](#)

[:DIGItal:RS232](#)

[:DIGItal:SPI](#)

[:DIGItal:VOLTage](#)

**PREV**

**NEXT**

## **:DIGItal:CONFIG**

### **Syntax**

:DIGItal:CONFIG

### **Description**

Parameter configuration instruction for the logic signal output module.

### **Example**

:DIGI:CONFIG

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- This command is the parameter configuration instruction for the logic signal output module. Other commands can only modify parameters but not change the module configuration. The modified parameters can be configured only after this command is used.

 PREV

 NEXT

## **:DIGItal[:DATA]**

### **Syntax**

:DIGItal[:DATA] VOLATILE,<flag>,< binary\_block\_data >

### **Description**

Send the data used for the output of the logic signal output module to the volatile memory.

### **Example**

:DIGI VOLATILE,END,#120101010110101111

### **Explanation**

- This command is only valid when DG5000 is installed with DG-POD-A and is powered on (refer to the [:DIGItal:STATe](#) command).
- The data sent to the volatile memory can be output from the data output channel of DG-POD-A.
- <flag> represents the state of the data transmission and can be set to CON or END. "CON": there is still data packet after this one; "END": this is the last data packet and data transmission is finished.
- <binary\_block\_data> is the binary data to be sent and the range is from 0000 to 3FFF. The length of the data should be no more than 32768 Bytes and the binary data block starts with #.

For example, send **:DIGItal VOLATILE,CON,#532768binary data**

the number **5** following **#** represents that the data length information **32768** holds 5 characters and **32768** represents the number of bytes of the **binary data**.

 PREV

 NEXT

## **:DIGItal:INTErval**

### **Syntax**

```
:DIGItal:INTErval <integer>|MINimum|MAXimum  
:DIGItal:INTErval? [MINimum|MAXimum]
```

### **Description**

Set the trigger interval of auto trigger for the logic signal output module.  
The query returns the trigger interval in scientific notation.

### **Example**

```
:DIGI:INTE 2  
The query returns 2.000000E+00.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- This command is only applicable to auto trigger (default). To modify the trigger mode, refer to the [\[:SOURce<n>\]:BURSt:TRIGger:SOURce](#) command. When the module is using **Burst** trigger, after the new parameters are configured (refer to the [:DIGItal:CONFIG](#) command), the module generates the first output under the new configuration only when four continuous triggers are received and then generates a output each time a trigger is received.
- This command only modifies the trigger interval of the protocol currently selected.
- <integer> is an integer parameter and its range is from 0s to 30s.

### **Default Setting**

0

## **:DIGItal:LENGth**

### **Syntax**

```
:DIGItal:LENGth <integer>|MINimum|MAXimum  
:DIGItal:LENGth? [MINimum|MAXimum]
```

### **Description**

Set the output data length for the logic signal output module.  
The query returns the data length in scientific notation.

### **Example**

```
:DIGI:LENG 2  
The query returns 2.000000E+00.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- This command only modifies the output data length of the protocol currently selected.
- <integer> is an integer parameter and its minimum is 1Byte. If the current code pattern of the output data is USER (refer to the [:DIGItal:PATTern](#) command), the sum of <integer> and user data offset (refer to the [:DIGItal:OFFSet](#) command) can not exceed the upper limits of the user space (262144Bytes) and the output data length of the protocol selected (as shown in the table below).

<b>Protocol Type</b>	<b>Upper Limit of Output Data Length (Byte)</b>
RS232	35840
SPI	40960
IIC	10240
PO	131072

## **:DIGItal:OFFSet**

### **Syntax**

```
:DIGItal:OFFSet <integer>|MINimum|MAXimum  
:DIGItal:OFFSet? [MINimum|MAXimum]
```

### **Description**

Set the user data offset for the logic signal output module.  
The query returns the offset in scientific notation.

### **Example**

```
:DIGI:OFFS 2  
The query returns 2.000000E+00.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command) and the code pattern of the output data of the module is set to USER (refer to the [:DIGItal:PATTern](#) command).
- This command only modifies the offset of the protocol currently selected.
- <integer> is an integer parameter and its range is from 0 byte to 262143 bytes. <integer>=1 represents the first byte data stored in user space will not be output.

### **Default Setting**

### **Syntax**

```
:DIGItal:PATTERn ALL0|ALL1|01|8PRBS|16PRBS|32PRBS|USER  
:DIGItal:PATTERn?
```

### **Description**

Set the code pattern of the output data for the logic signal output module.  
The query returns ALL0, ALL1, 01, 8PRBS, 16PRBS, 32PRBS or USER.

### **Example**

```
:DIGI:PATT ALL0  
The query returns ALL0.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- This command only modifies the code pattern of the output data of the protocol currently selected.
- When "USER" is selected, users can set the data output offset (refer to the [:DIGItal:OFFSet](#) command).

### **Default Setting**

## **:DIGItal:PROTocol**

### **Syntax**

```
:DIGItal:PROTocol RS232|SPI|IIC|PO  
:DIGItal:PROTocol?
```

### **Description**

Select protocol type for the logic signal output module.  
The query returns RS232, SPI, IIC or PO.

### **Example**

```
:DIGI:PROT PO  
The query returns PO.
```

### **Explanation**

This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).

## **:DIGItal:RATE**

### **Syntax**

```
:DIGItal:RATE <rate>|MINimum|MAXimum  
:DIGItal:RATE? [MINimum|MAXimum]
```

### **Description**

Set the data output rate for the logic signal output module.  
The query returns the output rate in scientific notation.

### **Example**

```
:DIGI:RATE 1000  
The query returns 1.000000E+03.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- The command only modifies the data output rate of the protocol currently selected.
- <rate> is an integer parameter and its range depends on the protocol currently selected as shown in the table below.

Protocol Type	Rate Range	Default Value
RS232	1bps to 60Mbps	9600bps
SPI	1bps to 60Mbps	1000bps
IIC	1bps to 15Mbps	1000bps
PO	1bps to 100Mbps	1000bps

```

### **Description**

Power the logic signal output module on or off.  
The query returns ON or OFF.

### **Example**

```
:DIGI:STAT ON  
The query returns ON.
```

### **Explanation**

This command is available only when the DG-POD-A is installed on DG5000.

## **:DIGItal:IIC:ADDReSS**

### **Syntax**

```
:DIGItal:IIC:ADDReSS <integer>  
:DIGItal:IIC:ADDReSS?
```

### **Description**

Set the IIC address.  
The query returns any integer between 0 and 127.

### **Example**

```
:DIGI:IIC:ADDR 127  
The query returns 127.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command) and the IIC address is set to User (refer to the [:DIGItal:IIC:ADDReSS:STATe](#) command).
- <integer> is an integer parameter and its range is from 0 to 127.

## **:DIGITAL:IIC:ADDRess:STATE**

### **Syntax**

```
:DIGITAL:IIC:ADDRess:STATE USER|NONE  
:DIGITAL:IIC:ADDRess:STATE?
```

### **Description**

Set the IIC address state.  
The query returns USER or NONE.

### **Example**

```
:DIGI:IIC:ADDR:STAT NONE  
The query returns NONE.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGITAL:STATE](#) command).
- USER: send the IIC address and the address sent is the address set by the [:DIGITAL:IIC:ADDRess](#) command. NONE: do not send the IIC address.

## **:DIGItal:IIC:CHANnel:SCLK**

### **Syntax**

```
:DIGItal:IIC:CHANnel:SCLK <channel>  
:DIGItal:IIC:CHANnel:SCLK?
```

### **Description**

Set the clock line of IIC output.  
The query returns D0, D1, ……, D14 or D15.

### **Example**

```
:DIGI:IIC:CHAN:SCLK 7  
The query returns D7.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- <channel> is an integer parameter and its range is from 0 to 15. Note, <channel> can not be set to the channel currently selected as data line (refer to the [:DIGItal:IIC:CHANnel:SDA](#) command).

:DIGItal:IIC:CHANnel:SDA?
```

### **Description**

Set the data line of IIC output.  
The query returns D0, D1,....., D14 or D15.

### **Example**

```
:DIGI:IIC:CHAN:SDA 8  
The query returns D8.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- <channel> is an integer parameter and its range is from 0 to 15. Note, <channel> can not be set to the channel currently selected as clock line (refer to the [:DIGItal:IIC:CHANnel:SCLK](#) command).

## **:DIGITAL:IIC:MODE**

### **Syntax**

```
:DIGITAL:IIC:MODE WRITe|READ  
:DIGITAL:IIC:MODE?
```

### **Description**

Set write or read as the IIC operation mode.  
The query returns WRITE or READ.

### **Example**

```
:DIGI:IIC:MODE READ  
The query returns READ.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGITAL:STATE](#) command).
- WRITe: write data; READ: read data.

[NEXT](#)

## **:DIGItal:PO:BITOrder**

### **Syntax**

```
:DIGItal:PO:BITOrder MSB|LSB  
:DIGItal:PO:BITOrder?
```

### **Description**

Set the bit order of PO data output.  
The query returns MSB or LSB.

### **Example**

```
:DIGI:PO:BITO MSB  
The query returns MSB.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- LSB: Least Significant Bit. For example, when the data is 00001111, D0 outputs the least significant bit 1 and D7 outputs the most significant bit 0.  
MSB: Most Significant Bit. When the data is 00001111, D0 outputs the most significant bit 0 and D7 outputs the least significant bit 1.

```

### **Description**

Set the phase of PO clock line (refer to the [:DIGItal:PO:CHANnel:SCLK](#) command).  
The query returns 0, 90, 180 or 270.

### **Example**

```
:DIGI:PO:CHAN:PHAS 90  
The query returns 90.
```

### **Explanation**

This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).

### **Default Setting**

0

## **:DIGItal:PO:CHANnel:SCLK**

### **Syntax**

```
:DIGItal:PO:CHANnel:SCLK C0|C1  
:DIGItal:PO:CHANnel:SCLK?
```

### **Description**

Set the clock line of PO data output.  
The query returns C0 or C1.

### **Example**

```
:DIGI:PO:CHAN:SCLK C1  
The query returns C1.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- C0 and C1 represent DCLK0 and DCLK1 on the module respectively.

### **Default Setting**

C0

### **Front Panel**

## **:DIGItal:PO:CHANnel:STATe**

### **Syntax**

```
:DIGItal:PO:CHANnel:STATe <integer>|ON|OFF  
:DIGItal:PO:CHANnel:STATe?
```

### **Description**

Set the data line of PO data output.

The query returns any integer between 1 and 65534, ON or OFF.

### **Example**

```
:DIGI:PO:CHAN:STAT 21
```

The query returns 21.

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- <integer>: decimal data. It can be set to any integer between 0 (0000000000000000 in binary) and 65535 (1111111111111111 in binary) and is used to represent the on/off state of the data channels D15~D0 (0 represents on, 1 represents off). For example, when <integer> is set to 21 (0000 0000 0001 0101), D0, D2 and D4 are set as data lines.
- ON: set all the 16 channels (D15~D0) to data lines (equal to setting <integer> to 65535).
- OFF: turn all the 16 channels (D15~D0) off (equal to setting <integer> to 0).

## **:DIGITAL:PO:TSTATe**

### **Syntax**

```
:DIGITAL:PO:TSTATe <channel>|NONE  
:DIGITAL:PO:TSTATe?
```

### **Description**

Set the mask data channel under PO protocol.  
The query returns D0, D1, ……, D14, D15 or NONE.

### **Example**

```
:DIGI:PO:TSTAT 1  
The query returns D1.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGITAL:STATE](#) command).
- <channel> is an integer parameter and its range is from 0 to 15. "NONE" represents that no mask channel is set.

### **Default Setting**

NONE

## **:DIGItal:PO:ZSTATe**

### **Syntax**

```
:DIGItal:PO:ZSTATe <integer>  
:DIGItal:PO:ZSTATe?
```

### **Description**

Set the tri-state channel of PO data output.  
The query returns any integer between 0 and 65535.

### **Example**

```
:DIGI:PO:ZSTAT 21  
The query returns 21.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATE](#) command).
- <integer>: decimal data. It can be set to any integer between 0 (0000000000000000 in binary) and 65535 (11111111111111 in binary) and is used to mark one or more channels in D15~D0 (0 represents normal output, 1 represents tri-state output) as tri-state channels. For example, when <integer> is set to 21 (0000 0000 0001 0101), D0, D2 and D4 are set as tri-state channels.

## **:DIGItal:RS232:BAUD**

### **Syntax**

```
:DIGItal:RS232:BAUD <baudrate>  
:DIGItal:RS232:BAUD?
```

### **Description**

Set the baud rate of RS232 data transmission.  
The query returns the baud rate in "<baudrate>BPS" format.

### **Example**

```
:DIGI:RS232:BAUD 19200  
The query returns 19200BPS.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- <baudrate> is an integer parameter and its range is from 1bps to 60Mbps.

## **:DIGITAL:SPI:BYTES**

### **Syntax**

:DIGITAL:SPI:BYTES <byte>  
:DIGITAL:SPI:BYTES?

### **Description**

Set the data bits per frame in SPI transmission.  
The query returns 1, 2 or 3.

### **Example**

:DIGI:SPI:BYTE 2  
The query returns 2.

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGITAL:STATE](#) command).
- <byte> is an integer parameter and can be set to 1, 2 or 3. This parameter is limited by data output length (refer to the [:DIGITAL:LENGTH](#) command). For example, if the data output length is 1Byte, <byte> can not be set to 2Bytes or 3Bytes and if data output length is 2Bytes, <byte> can not be set to 3Bytes.

:DIGItal:SPI:CHANnel:CS?
```

### **Description**

Set the CS line of SPI output.  
The query returns D0, D1, ……, D14 or D15.

### **Example**

```
:DIGI:SPI:CHAN:CS 9  
The query returns D9.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- <channel> is an integer parameter and its range is from 0 to 15. Note, <channel> can not be set to the channels currently selected as the clock line (refer to the [:DIGItal:SPI:CHANnel:SCLK](#) command) and data line (refer to the [:DIGItal:SPI:CHANnel:SDA](#) command).

## **:DIGItal:SPI:CPHA**

### **Syntax**

```
:DIGItal:SPI:CPHA 0|1  
:DIGItal:SPI:CPHA?
```

### **Description**

Set the clock phase of SPI.  
The query returns 0 or 1.

### **Example**

```
:DIGI:SPI:CPHA 1  
The query returns 1.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- 1: set the phase to 180°; 0: set the phase to 0°.

:DIGItal:SPI:CPOL 0|1  
:DIGItal:SPI:CPOL?
```

### **Description**

Set the clock polarity of SPI.  
The query returns 0 or 1.

### **Example**

```
:DIGI:SPI:CPOL 1  
The query returns 1.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGItal:STATe](#) command).
- 1: set to positive polarity; 0: set to negative polarity.

### **Default Setting**

0

### **Front Panel**

User\*, Protocol (SPI), Config, CPOL

## **:DIGITAL:VOLTAGE:ANALOG**

### **Syntax**

```
:DIGITAL:VOLTAGE:ANALOG <voltage>  
:DIGITAL:VOLTAGE:ANALOG?
```

### **Description**

Set the analog channel voltage for the logic signal output module.  
The query returns the voltage in scientific notation.

### **Example**

```
:DIGI:VOLT:ANAL 2.5  
The query returns 2.500000E+00.
```

### **Explanation**

- This command is available only when the DG-POD-A is installed on DG5000 and is powered on (refer to the [:DIGITAL:STATE](#) command).
- This command only modifies the analog channel voltage of the protocol currently selected.
- <voltage> is a real parameter and its ranges available are 2.0V to 4.5V (when protocol type is set to RS232) and 1.4V to 9.4V (when protocol type is set to SPI, IIC or PO).
- When the analog channel voltage is greater than 4.2V, digital channel voltage (refer to the [:DIGITAL:VOLTAGE:DIGITAL](#) command) is automatically adjusted to be 3/8 of the analog channel voltage.

### **Default Setting**

2.5V (when the protocol type is set to RS232), 3.3V (when the protocol type is set to SPI, IIC or PO)

## **:DISPlay:BRIGHTness**

### **Syntax**

```
:DISPlay:BRIGHTness <brightness>|MINimum|MAXimum  
:DISPlay:BRIGHTness? [MINimum|MAXimum]
```

### **Description**

Set the display brightness of the screen.  
The query returns the brightness percentage.

### **Example**

```
:DISP:BRIG 47% The query returns 47%.  
:DISP:BRIG 49% The query returns 52%.
```

### **Explanation**

- The value range of <brightness>: 5% to 100%(or 5 to 100).
- The screen has 19 brightness levels: 5, 10, 15, 21, 26, 31, 36, 42, 47, 52, 57, 63, 68, 73, 78, 84, 89, 94 and 100.
- If the set brightness value is not one of the 19 brightness levels, the brightness will be automatically adjusted to the right level higher than the set one. For example, the set parameter is 49% and the query returns 52%.
- This setting is stored in non-volatile memory and will not be influenced by "Preset" (\*RST).

### **Syntax**

```
:DISPlay[:WINDOW]:HLIGHT:COLor <color>
:DISPlay[:WINDOW]:HLIGHT:COLor?
```

### **Description**

Set the background color of the parameter or the menu selected on the interface.  
The query returns RED, DEEPRED, YELLOW, GREEN, AZURE, NAVYBLUE, BLUE, LILAC, PURPLE or ARGENT.

### **Example**

```
:DISP:HLIG:COL YELLOW
The query returns YELLOW.
```

### **Explanation**

- <color> can be set to RED, DEEPRED, YELLOW, GREEN, AZURE, NAVYBLUE, BLUE, LILAC, PURPLE or ARGENT.
- This setting is stored in non-volatile memory and will not be influenced by "Preset" (\*RST).

Store/Recall, Browser (File), New Directory

**↑ PREV**

**↓ NEXT**

## **:MMEMORY:COPY**

### **Syntax**

**:MMEMORY:COPY <directory\_name>,<file\_name>**

### **Description**

Copy the file specified by <file\_name> under the current directory to the directory (not the current directory) specified by <directory\_name>.

### **Example**

**:MMEM:COPY "D:\","0.RSF"**

### **Explanation**

- <directory\_name>: the target directory. Characters enclosed in double quotation marks and the length is limited within 300 characters;
- <file\_name>: the name of the file to be copied. Characters (with suffix) enclosed in double quotation marks and the length is limited within 40 characters.

### **Front Panel**

Store/Recall, Copy, Paste

## **:MMEMory:DELetE**

### **Syntax**

**:MMEMory:DELetE <file\_name>**

### **Description**

Delete the file or folder specified by <file\_name> under the current directory.

### **Example**

**:MMEM:DEL "11.RSF"**

### **Explanation**

<file\_name>: the name of the file or folder to be deleted. Character string (the filename should have suffix) enclosed in double quotation marks and the length is limited within 40 characters.

### **Front Panel**

Store/Recall, Delete

 PREV

 NEXT

## **:MMEMORY:LOAD**

### **Syntax**

`:MMEMORY:LOAD <file_name>`

### **Description**

Load the file specified by `<file_name>` under the current directory.

### **Example**

`:MMEM:LOAD "00.RSF"`

### **Explanation**

- `<file_name>`: the name of the file to be loaded. Character string (with suffix) enclosed in double quotation marks and the length is limited within 40 characters.
- The file types available include State File (.RSF) and Arb wave File (.RAF). If the "Frequency Hopping" option is currently installed, FH Map (.RHM), FH List (.RHL) and FH Sequence (.RHS) file types are also available.
- Arb wave and FH files are loaded to the current channel.

### **Front Panel**

Store/Recall, Recall

**↑ PREV**

**↓ NEXT**

## **:MMEMory:STORe**

### **Syntax**

**:MMEMory:STORe <file\_name>**

### **Description**

Store the file under the current directory with the filename specified by <file\_name>.

### **Example**

**:MMEM:STOR "cs.RSF"**

### **Explanation**

- <file\_name>: the name of the file to be stored. Character string (with suffix) enclosed in double quotation marks and the length is limited within 30 characters.
- The file types available include State File (.RSF) and Arb wave File (.RAF). If the "Frequency Hopping" option is currently installed, FH Map (.RHM), FH List (.RHL) and FH Sequence (.RHS) file types are also available.
- Arb wave and FH files store the current channel data.

## **OUTPut Subsystem**

:OUTPut[<n>] commands are used to set and control the output parameters and state of the channel. <n> represents the label number of the channel and the value can be 1 or 2. The operation is on CH1 by default.

[:OUTPut\[<n>\]\[:STATe\]](#)  
[:OUTPut\[<n>\]:IMPedance](#)  
[:OUTPut\[<n>\]:LOAD](#)  
[:OUTPut\[<n>\]:POLarity](#)  
[:OUTPut\[<n>\]:SYNC\[:STATe\]](#)  
[:OUTPut\[<n>\]:SYNC:POLarity](#)  
[:OUTPut\[<n>\]:ATTenuation](#)

 **PREV**

**NEXT** 

## **:OUTPut[<n>][:STATe]**

### **Syntax**

```
:OUTPut[<n>][:STATe] ON|OFF  
:OUTPut[<n>][:STATe]?
```

### **Description**

Enable or disable the output of the [Output] connector at the front panel corresponding to the channel.

The query returns ON or OFF.

### **Example**

```
:OUTP ON  
The query returns ON.
```

### **Default Setting**

OFF

### **Front Panel**

The Output buttons corresponding to CH1 and CH2.

 PREV

 NEXT

## **:OUTPut[<n>]:IMPedance**

### **Syntax**

```
:OUTPut[<n>]:IMPedance <ohms>|INFinity|MINimum|MAXimum  
:OUTPut[<n>]:IMPedance? [MINimum|MAXimum]
```

### **Description**

Set the output impedance of the [Output] connector at the front panel and the default unit is "Ω".  
The query returns the specific impedance value or INFINITY (High Z).

### **Example**

```
:OUTP2:IMP 50  
The query returns 50.
```

### **Explanation**

- <ohms>: the range available is from 1 to 10000 (1 Ω to 10 kΩ).
- Completely compatible with the [:OUTPut\[<n>\]:LOAD](#) command.

### **Default Setting**

INFinity (High Z)

### **Front Panel**

Utility, CH1 Set/CH2 Set, Resi

**↑ PREV**

**↓ NEXT**

## **:OUTPut[<n>]:LOAD**

### **Syntax**

```
:OUTPut[<n>]:LOAD <ohms>|INFinity|MINimum|MAXimum  
:OUTPut[<n>]:LOAD? [MINimum|MAXimum]
```

### **Description**

Set the output impedance of the [Output] connector at the front panel and the default unit is " $\Omega$ ".  
The query returns the specific impedance value or INFINITY (High Z).

### **Example**

```
:OUTP2:LOAD 50  
The query returns 50.
```

### **Explanation**

- <ohms>: the range available is from 1 to 10000 (1  $\Omega$  to 10 k $\Omega$ ).
- Complete compatibility with the [\*\*:OUTPut\[<n>\]:IMPedance\*\*](#) instruction.

### **Default Setting**

INFinity (High Z)

### **Front Panel**

**↑ PREV**

**↓ NEXT**

## **:OUTPut[<n>]:POLarity**

### **Syntax**

```
:OUTPut[<n>]:POLarity NORMAL|INVerted  
:OUTPut[<n>]:POLarity?
```

### **Description**

Set the output polarity of the signal at the [Output] connector to normal or invert.  
The query returns NORMAL or INVERTED.

### **Example**

```
:OUTP1:POL INV  
The query returns INVERTED.
```

### **Explanation**

- The waveform inverts relatively to the offset voltage.
- After inversion: none offset voltage is changed; the waveform under the Graphic mode is not invert; the sync signal related to the waveform is not invert.

### **Default Setting**

NORMAL

### **Front Panel**

Utility, CH1 Set/CH2 Set, Output

**↑ PREV**

**↓ NEXT**

## **:OUTPut[<n>]:SYNC[:STATe]**

### **Syntax**

```
:OUTPut[<n>]:SYNC[:STATe] ON|OFF  
:OUTPut[<n>]:SYNC[:STATe]?
```

### **Description**

Enable or disable the sync signal on the [Sync] connector.  
The query returns ON or OFF.

### **Example**

```
:OUTP:SYNC ON  
The query returns ON.
```

### **Explanation**

When sync signal is disabled, the output level on the [Sync] connector is logic low level.

### **Default Setting**

ON

### **Front Panel**

Utility, CH1 Set/CH2 Set, Sync

**↑ PREV**

## **:OUTPut[<n>]:SYNC:POLarity**

### **Syntax**

```
:OUTPut[<n>]:SYNC:POLarity POSitive|NEGative  
:OUTPut[<n>]:SYNC:POLarity?
```

### **Description**

Set the sync signal on the [Sync] connector to normal or invert.  
The query returns POS or NEG.

### **Example**

```
:OUTP2:SYNC:POL POS  
The query returns POS.
```

### **Default Setting**

POSitive

### **Front Panel**

Utility, CH1 Set/CH2 Set, Polarity

 PREV

 NEXT

## **:OUTPut[<n>]:ATTenuation**

### **Syntax**

```
:OUTPut[<n>]:ATTenuation 1X|2X|5X|10X  
:OUTPut[<n>]:ATTenuation?
```

### **Description**

Set the attenuation (amplification) coefficient of the signal on the [Output] connector.  
The query returns 1X, 2X, 5X or 10X.

### **Example**

```
:OUTP:ATT 5X  
The query returns 5X.
```

### **Explanation**

The actual output amplitude is the product of the amplitude displayed on the screen and the attenuation coefficient.

### **Default Setting**

1X

### **Front Panel**

Utility, CH1 Set/CH2 Set, Attenuat

**↑ PREV**

**↓ NEXT**

## SOURce Subsystem

[**:SOURce< n >**] series commands are used to set the relative parameters of the output signal of basic waveform, arbitrary waveform, modulated waveform (Mod), sweep waveform (Sweep) and burst waveform (Burst). <n> represents the label number of the channel and the value can be 1 or 2. The operation is on CH1 by default.

The following types are included:

[\[\*\*:SOURce< n >\*\*\]:APPLy](#)  
[\[\*\*:SOURce< n >\*\*\]:BURSt](#)  
[\[\*\*:SOURce< n >\*\*\]:FREQuency](#)

## **[**:SOURce< n >**]:APPLy:**SIN**usoid**

### **Syntax**

```
[:SOURce< n >]:APPLy:SINusoid [<freq>[,<amp>[,<offset>[,<phase>]]]]
```

### **Description**

Output a sine waveform with specified frequency, amplitude, DC offset and start phase.

### **Example**

```
:APPL:SIN 20000,2.5,0.5,10
```

### **Explanation**

- <freq>: 1 µHz to 350 MHz and the default unit is "Hz".
- <amp>: limited by the "Resistance" and "Freq/Period" settings. For details, please refer to the User's Guide of this product. The default unit is "Vpp".
- <offset>: limited by the "Resistance" and "Ampl/HoLevel" settings. For details, please refer to the User's Guide of this product. The default unit is "Vdc".
- <phase>: 0° to 360° and the default unit is "°".
- Output waveform immediately after executing the command.

### **Default Setting**

1 kHz, 5 Vpp, 0 Vdc, 0°

### **Front Panel**

## **[**:SOURce< n >**]:APPLy:SQUare**

### **Syntax**

```
[:SOURce< n >]:APPLy:SQUare [<freq>[,<amp>[,<offset>[,<phase>]]]]
```

### **Description**

Output a square waveform with specified frequency, amplitude, DC offset and start phase.

### **Example**

```
:APPL:SQU 20000,2.5,0.5,10
```

### **Explanation**

- <freq>: 1 μHz to 120 MHz and the default unit is "Hz".
- <amp>: limited by the "Resistance" and "Freq/Period" settings. For details, please refer to the User's Guide of this product. The default unit is "Vpp".
- <offset>: limited by the "Resistance" and "Ampl/HoLevel" settings. For details, please refer to the User's Guide of this product. The default unit is "Vdc".
- <phase>: 0° to 360° and the default unit is "°".
- Output waveform immediately after executing the command.

**↓ NEXT**

## **[**:SOURce< n >**]:APPLy:RAMP**

### **Syntax**

```
[:SOURce< n >]:APPLy:RAMP [<freq>[,<amp>[,<offset>[,<phase>]]]]]
```

### **Description**

Output a ramp waveform with specified frequency, amplitude, DC offset and start phase.

### **Example**

```
:APPL:RAMP 20000,2.5,0.5,10
```

### **Explanation**

- <freq>: 1 μHz to 5 MHz and the default unit is "Hz".
- <amp>: limited by the "Resistance" and "Freq/Period" settings. For details, please refer to the User's Guide of this product. The default unit is "Vpp".
- <offset>: limited by the "Resistance" and "Ampl/HoLevel" settings. For details, please refer to the User's Guide of this product. The default unit is "Vdc".
- <phase>: 0° to 360° and the default unit is "°".
- Output waveform immediately after executing the command.

### **Default Setting**

1 kHz, 5 Vpp, 0 Vdc, 0°

### **Front Panel**

Ramp

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:APPLy:PULSe**

### **Syntax**

```
[:SOURce< n >]:APPLy:PULSe [<freq>[,<amp>[,<offset>[,<delay>]]]]
```

### **Description**

Output a pulse waveform with specified frequency, amplitude, DC offset and delay.

### **Example**

```
:APPL:PULS 20000,2.5,0.5,0.00002
```

### **Explanation**

- <freq>: 1 µHz to 50 MHz and the default unit is "Hz".
- <amp>: limited by the "Resistance" and "Freq/Period" settings. For details, please refer to the User's Guide of this product. The default unit is "Vpp".
- <offset>: limited by the "Resistance" and "Ampl/HoLevel" settings. For details, please refer to the User's Guide of this product. The default unit is "Vdc".
- <delay>: 0 s to the pulse period and the default unit is "s".
- Output waveform immediately after executing the command.

## **[**:SOURce< n >**]:APPLy:NOISe**

### **Syntax**

```
[:SOURce< n >]:APPLy:NOISe [<amp>[,<offset>]]
```

### **Description**

Output a noise waveform with specified amplitude and DC offset.

### **Example**

```
:APPL:NOIS 2.5,0.5
```

### **Explanation**

- <amp>: limited by the "Resistance" and "Freq/Period" settings. For details, please refer to the User's Guide of this product. The default unit is "Vpp".
- <offset>: limited by the "Resistance" and "Ampl/HoLevel" settings. For details, please refer to the User's Guide of this product. The default unit is "Vdc".
- Output waveform immediately after executing the command.

### **Default Setting**

5 Vpp, 0 Vdc

### **Front Panel**

Noise

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:APPLy:USER**

### **Syntax**

```
[:SOURce< n >]:APPLy:USER [<freq>[,<amp>[,<offset>[,<phase>]]]]]
```

### **Description**

Output an arbitrary waveform with specified frequency, amplitude, DC offset and start phase.

### **Example**

```
:APPL:USER 20000,2.5,0.5, 10
```

### **Explanation**

- <freq>: 1 μHz to 50 MHz and the default unit is "Hz".
- <amp>: limited by the "Resistance" and "Freq/Period" settings. For details, please refer to the User's Guide of this product. The default unit is "Vpp".
- <offset>: limited by the "Resistance" and "Ampl/HoLevel" settings. For details, please refer to the User's Guide of this product. The default unit is "Vdc".
- <phase>: 0° to 360° and the default unit is "°".
- Output waveform immediately after executing the command.
- When the arbitrary waveform is DC, the instrument will directly pick up the offset parameter to modify the DC parameter while the frequency, amplitude and phase parameters will be discarded.

### **Default Setting**

1 kHz, 5 Vpp, 0 Vdc, 0°

### **Front Panel**

Arb

↑ PREV

## **[**:SOURce< n >**]:APPLy?**

### **Syntax**

**[**:SOURce< n >**]:APPLy?**

### **Description**

Query the current configuration of the function generator and returns a character string enclosed in double quotation marks.

### **Return Value**

- Return Value Format: "waveform name, frequency, amplitude, offset, start phase/delay".
- Items without a corresponding value is replaced by "DEF".

For example, "NOISE,DEF,3.500000E+00,-2.000000E+00,DEF"

## **[**:SOURce< n >**]:BURSt:MODE**

### **Syntax**

**[**:SOURce< n >**]:BURSt:MODE TRIGgered|GATED|INFinity  
[:SOURce< n >]:BURSt:MODE?**

### **Description**

Select the Burst type: N Cycle, Gated or Infinite.  
The query returns TRIG, GAT or INF.

### **Example**

**:SOUR1:BURS:MODE GAT**  
The query returns GAT.

### **Default Setting**

TRIGgered (N Cycle)

### **Front Panel**

Burst, Type

**↑ PREV**

**↓ NEXT**

## **[:SOURce<n>]:BURSt:NCYCles**

### **Syntax**

```
[:SOURce<n>]:BURSt:NCYCles <cycles>|MINimum|MAXimum  
[:SOURce<n>]:BURSt:NCYCles? [MINimum|MAXimum]
```

### **Description**

Set the cycle number of the Burst.  
The query returns the value of the cycle number.

### **Example**

```
:BURSt:NCYC 2  
The query returns 2.
```

### **Explanation**

- This command is only valid in N Cycle mode.
- <cycles>: the range available is from 1 to 1 000 000.

### **Default Setting**

1

### **Front Panel**

Burst, Type (N Cyc)

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:BURSt[:STATe]**

### **Syntax**

```
[:SOURce< n >]:BURSt[:STATe] ON|OFF  
[:SOURce< n >]:BURSt[:STATe]?
```

### **Description**

Enable or disable the Burst function.  
The query returns ON or OFF.

### **Example**

```
:BURS:STAT ON  
The query returns ON.
```

### **Explanation**

When Burst is enabled, Sweep or Mod function is turned off automatically (if it is turned on currently).

### **Front Panel**

Burst

 PREV

 NEXT

## **[**:SOURce< n >**]:BURSt:TDELay**

### **Syntax**

```
[:SOURce< n >]:BURSt:TDELay <delay>|MINimum|MAXimum  
[:SOURce< n >]:BURSt:TDELay? [MINimum|MAXimum]
```

### **Description**

Set the time that the signal generator holds from receiving a trigger signal to starting outputting the N Cycle (or Infinite) burst and the default unit is "s".  
The query returns the time value in scientific notation.

### **Example**

```
:BURS:TDEL 2.5  
The query returns 2.500000E+00.
```

### **Explanation**

- This command is valid in N Cycle and Infinite mode.
- <delay>: 0 s to 85 s. When internal trigger source is used, the delay of the N cycle burst is also limited by the carrier period, pulse period and number of cycles.

### **Default Value**

0 s

### **Front Panel**

Burst, Type (N Cyc or Infinite), Delay

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:BURSt:PHASe**

### **Syntax**

```
[:SOURce< n >]:BURSt:PHASe <phase>|MINimum|MAXimum  
[:SOURce< n >]:BURSt:PHASe? [MINimum|MAXimum]
```

### **Description**

Set the start phase of the burst and the default unit is "°".  
The query returns the phase value in scientific notation.

### **Example**

```
:BURSt:PHAS 10  
The query returns 1.000000E+01.
```

### **Explanation**

- <phase>: the range available is from 0° to 360°.
- For sine, square and ramp waveforms, 0° is the point where the waveform passes through 0 V (or DC offset value) positively.
- For arbitrary waveform, 0° is the first waveform point.
- For pulse and noise waveforms, this setting is invalid.

### **Default Value**

0°

### **Front Panel**

Burst, Start Phase

**↓ NEXT**

## **[**:SOURce< n >**]:BURSt:INTernal:PERiod**

### **Syntax**

```
[:SOURce< n >]:BURSt:INTernal:PERiod <period>|MINimum|MAXimum  
[:SOURce< n >]:BURSt:INTernal:PERiod? [MINimum|MAXimum]
```

### **Description**

Set the Burst period (the time from the beginning of the N Cycle burst to the beginning of the next burst) and the default unit is "s".

The query returns the period value in scientific notation.

### **Example**

```
:BURS:INT:PER 0.5
```

The query returns 5.000000E-01.

### **Explanation**

- This command is only applicable to N Cycle burst in internal trigger mode.
- Burst Period  $\geq 1 \mu\text{s} + \text{Waveform Period} \times \text{Burst Number}$ . (the waveform period is the period of the burst function (sine, square etc.)).
- If the set Burst period is too small, the signal generator will automatically increase this period to allow the output with specified cycle number.

### **Default Value**

10 ms

## **[**:SOURce< n >**]:BURSt:GATE:POLarity**

### **Syntax**

```
[:SOURce< n >]:BURSt:GATE:POLarity NORMAL|INVerted  
[:SOURce< n >]:BURSt:GATE:POLarity?
```

### **Description**

Output burst waveform when the gated signal on the [ExtTrig] connector at the rear panel is high level or low level.

The query returns NORM or INV.

### **Example**

```
:BURSt:GATE:POL NORM  
The query returns NORM.
```

### **Explanation**

This command is only valid in Gated Burst mode.

### **Default Value**

Positive

### **Front Panel**

Burst, Type (Gated), Polarity

**↓ NEXT**

## **[**:SOURce< n >**]:BURSt:TRIGger[:IMMEDIATE]**

### **Syntax**

**[**:SOURce< n >**]:BURSt:TRIGger[:IMMEDIATE]**

### **Description**

Trigger the instrument immediately.

### **Explanation**

This command is valid only when the trigger source is in manual mode.

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:BURSt:TRIGger:SLOPe**

### **Syntax**

```
[:SOURce< n >]:BURSt:TRIGger:SLOPe POSitive|NEGative  
[:SOURce< n >]:BURSt:TRIGger:SLOPe?
```

### **Description**

Select to enable the burst output on the "Leading" or "Trailing" edge of the external trigger signal.  
The query returns POS or NEG.

### **Example**

```
:BURSt:TRIG:SLOPe NEG  
The query returns NEG.
```

### **Explanation**

This command is only valid when external trigger source is selected.

### **Default Setting**

POS (Leading)

### **Front Panel**

Burst, Scource (External), SlopeIn

**↓NEXT**

## **[**:SOURce< n >**]:BURSt:TRIGger:TRIGOut**

### **Syntax**

```
[:SOURce< n >]:BURSt:TRIGger:TRIGOut OFF|POSitive|NEGative  
[:SOURce< n >]:BURSt:TRIGger:TRIGOut?
```

### **Description**

Specify the edge type of the trigger output signal.  
The query returns OFF, POS or NEG.

### **Example**

```
:BURSt:TRIG:TRIGO POS  
The query returns POS.
```

### **Explanation**

- OFF: disable the trigger output signal.  
POSitive (Leading): output the trigger signal on the rising edge.  
NEGative (Trailing): output the trigger signal on the falling edge.
- Valid when trigger source is in "Internal" or "Manual" mode.

### **Default Setting**

OFF

### **Front Panel**

Burst, Source (Internal or Manual), Trig Out

## **[**:SOURce< n >**]:FREQuency[:FIXed]**

### **Syntax**

```
[:SOURce< n >]:FREQuency[:FIXed] <frequency>|MINimum|MAXimum  
[:SOURce< n >]:FREQuency[:FIXed]? [MINimum|MAXimum]
```

### **Description**

Set the frequency of the basic waveform and the default unit is "Hz".  
The query returns the frequency value in scientific notation.

### **Example**

```
:FREQ:FIX 1500  
The query returns 1.500000E+03.
```

### **Explanation**

Different waveforms correspond to different frequency ranges.

- Sine: 1 µHz to 350 MHz
- Square: 1 µHz to 120 MHz
- Ramp: 1 µHz to 5 MHz
- Pulse: 1 µHz to 50 MHz
- Arb: 1 µHz to 50 MHz

## **[**:SOURce< n >**]:FREQuency:CENTER**

### **Syntax**

```
[:SOURce< n >]:FREQuency:CENTer <frequency>|MINimum|MAXimum  
[:SOURce< n >]:FREQuency:CENTer? [MINimum|MAXimum]
```

### **Description**

Set the center frequency of the Sweep and the default unit is "Hz".  
The query returns the frequency value in scientific notation.

### **Example**

```
:FREQ:CENT 600  
The query returns 6.000000E+02.
```

### **Explanation**

Different sweep waveforms correspond to different center frequency ranges.

- Sine: 1 µHz to 250 MHz
- Square: 1 µHz to 120 MHz
- Ramp: 1 µHz to 5 MHz
- Arb: 1 µHz to 50 MHz (except the built-in DC waveform)

## **[**:SOURce< n >**]:FREQuency:SPAN**

### **Syntax**

```
[:SOURce< n >]:FREQuency:SPAN <frequency>|MINimum|MAXimum  
[:SOURce< n >]:FREQuency:SPAN? [MINimum|MAXimum]
```

### **Description**

Set the frequency span of the Sweep and the default unit is "Hz".  
The query returns the frequency span value in scientific notation.

### **Example**

```
:FREQ:SPAN 1100  
The query returns 1.100000E+03.
```

### **Explanation**

Different sweep waveforms correspond to different frequency span ranges.

- Sine: 0 Hz to 250 MHz
- Square: 0 Hz to 120 MHz
- Ramp: 0 Hz to 5 MHz
- Arb: 0 Hz to 50 MHz (except the built-in DC waveform)

### **Default Value**

900 Hz

### **Front Panel**

Sweep, End/Span

## **[**:SOURce< n >**]:FREQuency:STARt**

### **Syntax**

```
[:SOURce< n >]:FREQuency:STARt <frequency>|MINimum|MAXimum  
[:SOURce< n >]:FREQuency:STARt? [MINimum|MAXimum]
```

### **Description**

Set the start frequency of the Sweep and the default unit is "Hz".  
The query returns the frequency value in scientific notation.

### **Example**

```
:FREQ:STAR 50  
The query returns 5.000000E+01.
```

### **Explanation**

Different sweep waveforms correspond to different start frequency ranges.

- Sine: 1 µHz to 250 MHz
- Square: 1 µHz to 120 MHz
- Ramp: 1 µHz to 5 MHz
- Arb: 1 µHz to 50 MHz (except the built-in DC waveform)

### **Default Value**

100 Hz

### **Front Panel**

Sweep, Start/Center

**↓ NEXT**

## **[**:SOURce< n >**]:FREQuency:STOP**

### **Syntax**

```
[:SOURce< n >]:FREQuency:STOP <frequency>|MINimum|MAXimum  
[:SOURce< n >]:FREQuency:STOP? [MINimum|MAXimum]
```

### **Description**

Set the end frequency of the Sweep and the default unit is "Hz".  
The query returns the frequency value in scientific notation.

### **Example**

```
:FREQ:STOP 1150  
The query returns 1.150000E+03.
```

### **Explanation**

Different sweep waveforms correspond to different end frequency ranges.

- Sine: 1 µHz to 250 MHz
- Square: 1 µHz to 120 MHz
- Ramp: 1 µHz to 5 MHz
- Arb: 1 µHz to 50 MHz (except the built-in DC waveform)

### **Default Value**

1 kHz

### **Front Panel**

Sweep, End/Span

[\[:SOURce< n >\]:FUNCTION:ARB:SAMPLE](#)

[!\[\]\(404998467308fb18602019e9453b0c36\_img.jpg\) PREV](#)

[!\[\]\(0c4a29bd538d3c23f04a62125dab4868\_img.jpg\) NEXT](#)

## **[**:SOURce< n >**]:**FUNCtion[:SHAPe]****

### **Syntax**

```
[:SOURce< n >]:FUNCtion[:SHAPe]
SINusoid|SQUare|RAMP|PULSe|NOISe|USER|DC|SINC|EXPRise|EXPFall|CARDiac|GAUSSian
|HAVersine|LORentz|ARBPUlSE|DUAltone
[:SOURce< n >]:FUNCtion[:SHAPe]?
```

### **Description**

Select waveform.

The query returns SIN, SQU, RAMP, PULSE, NOISE, USER, DC, SINC, EXPR, EXPF, CARD, GAUS, HAV, LOR, ARBPULSE or DUA.

### **Example**

```
:FUNC:SHAP SQU
```

The query returns SQU.

### **Explanation**

- If the modulation, sweep and burst mode are not currently enabled, this command selects the waveform to be output.
- If the modulation, sweep or burst mode is currently enabled, this command selects the carrier waveform of the corresponding function.
- Send the :FUNCtion DC command and the instrument will automatically disable the modulation, sweep or burst function (currently enabled).

### **Default Value**

SIN

### **Front Panel**

Sine/Square/Ramp/Pulse/Noise/Arb

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:**FUNCtion:RAMP:SYMMetry****

### **Syntax**

```
[:SOURce< n >]:FUNCtion:RAMP:SYMMetry <symmetry>|MINimum|MAXimum  
[:SOURce< n >]:FUNCtion:RAMP:SYMMetry? [MINimum|MAXimum]
```

### **Description**

Set the symmetry of the ramp waveform, expressed in % and support settings without %.  
The query returns the symmetry in scientific notation.

### **Example**

```
:FUNC:RAMP:SYMM 80% or :FUNC:RAMP:SYMM 80  
The query returns 8.000000E+01.
```

### **Explanation**

The range of the symmetry is from 0% to 100%.

### **Default Value**

50%

### **Front Panel**

Ramp, Symmetry

**↓NEXT**

## **[**:SOURce< n >**]:**FUNCtion:SQUare:DCYCle****

### **Syntax**

```
[:SOURce< n >]:FUNCtion:SQUare:DCYCle <percent>|MINimum|MAXimum  
[:SOURce< n >]:FUNCtion:SQUare:DCYCle? [MINimum|MAXimum]
```

### **Description**

Set the duty cycle of the square waveform, expressed in % and support settings without %. The query returns the duty cycle in scientific notation.

### **Example**

```
:FUNC:SQU:DCYC 70%    or    :FUNC:SQU:DCYC 70  
The query returns 7.000000E+01.
```

### **Explanation**

The duty cycle range is limited by the "Freq/Period" setting.

- Frequency ≤ 10 MHz: 20% to 80%
- 10 MHz < Frequency ≤ 40 MHz: 40% to 60%
- Frequency > 40 MHz: 50%

### **Default Value**

50%

### **Front Panel**

Square, Duty Cycle

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:**FUNCtion:ARB:MODE****

### **Syntax**

```
[:SOURce< n >]:FUNCtion:ARB:MODE INTernal|PLAY  
[:SOURce< n >]:FUNCtion:ARB:MODE?
```

### **Description**

Select the output mode of the arbitrary waveform: "INTernal" (also called Normal) or "PLAY".  
The query returns INT or PLAY.

### **Example**

```
:FUNC:ARB:MODE PLAY  
The query returns PLAY.
```

### **Front Panel**

Arb, Mode

PREV

NEXT

## **[**:SOURce< n >**]:**FUNCtion:ARB:SAMPLE****

### **Syntax**

```
[:SOURce< n >]:FUNCtion:ARB:SAMPLE <samplediv>|MINimum|MAXimum  
[:SOURce< n >]:FUNCtion:ARB:SAMPLE? [MINimum|MAXimum]
```

### **Description**

Set the frequency division coefficient of the sample rate of the arbitrary waveform.  
The query returns integer coefficient value.

### **Example**

```
:FUNC:ARB:SAMPLE 1
```

The query returns 1.

### **Explanation**

- The functional relationship between the sample rate "fs" and the frequency division coefficient "N" is shown below:  
When  $N \leq 2$ ,  $fs = 1G/2^N$   
When  $N > 2$ ,  $fs = 1G/((N-2)*8)$   
The range of N is from 0 to  $268435456(2^{28})$ .
- Valid only in "Play" mode.

### **Default Value**

0

### **Syntax**

```
[:SOURce< n >]:MARKer[:STATe] ON|OFF  
[:SOURce< n >]:MARKer[:STATe]?
```

### **Description**

Enable or disable the "Mark" frequency function.  
The query returns ON or OFF.

### **Example**

```
:MARKer ON  
The query returns ON.
```

### **Explanation**

The mark frequency function is not available in step sweep mode.

### **Front Panel**

Sweep, MarkFreq

```
[:SOURce< n >]:MARKer:FREQuency <frequency>|MINimum|MAXimum  
[:SOURce< n >]:MARKer:FREQuency? [MINimum|MAXimum]
```

### **Description**

Set the mark frequency of the Sweep and the default unit is "Hz".  
The query returns the frequency value in scientific notation.

### **Example**

```
:MARK:FREQ 800  
The query returns 8.000000E+02.
```

### **Explanation**

The range is limited by the "Start Frequency" and "End Frequency".

### **Default Value**

550 Hz

### **Front Panel**

**↓ NEXT**

## **[**:SOURce< n >**]:MOD:TYPe**

### **Syntax**

```
[:SOURce< n >]:MOD:TYPe AM|FM|PM|ASK|FSK|PSK|PWM|IQ  
[:SOURce< n >]:MOD:TYPe?
```

### **Description**

Select the modulating type of the signal generator.  
The query returns AM, FM, PM, ASK, FSK, PSK, PWM or IQ.

### **Example**

```
:SOUR:MOD:TYP PM  
The query returns PM.
```

### **Explanation**

- PWM modulation is valid only when Pulse is turned on.
- IQ modulation is valid only when Sine is turned on.

### **Front Panel**

Mod, Type

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:MOD:AM[**:DEPTh**]**

### **Syntax**

```
[:SOURce< n >]:MOD:AM[:DEPTh] <depth>|MINimum|MAXimum  
[:SOURce< n >]:MOD:AM[:DEPTh]? [MINimum|MAXimum]
```

### **Description**

Set the amplitude vibration degree of the AM (Modulation Depth), expressed in percentage.  
The query returns the modulation depth percentage in scientific notation.

### **Example**

```
:MOD:AM:DEPT 80%  
The query returns 8.000000E+01.
```

### **Explanation**

- <depth>: the range available is from 0% to 120%.
- When it is 0%, the output amplitude is half of the specified value.
  - When it is 100%, the output amplitude is equal to the specified value.
  - When it is higher than 100%, the output of the instrument will not exceed 10 Vpp (the load is 50 Ω).

## **[**:SOURce< n >**]:MOD:FM[**:DEViation**]**

### **Syntax**

```
[:SOURce< n >]:MOD:FM[:DEViation] <deviation>|MINimum|MAXimum  
[:SOURce< n >]:MOD:FM[:DEViation]? [MINimum|MAXimum]
```

### **Description**

Set the frequency deviation of the FM modulating waveform relative to the carrier waveform frequency and the default unit is "Hz".

The query returns the deviation value in scientific notation.

### **Example**

```
:MOD:FM:DEV 700  
The query returns 7.000000E+02.
```

### **Explanation**

Frequency deviation <deviation> should fulfill the following conditions:

- Less than or equal to the carrier waveform frequency.
- Frequency Deviation + Carrier Waveform Frequency ≤ The upper limit of the current Carrier Waveform Frequency + 1 kHz.

### **Front Panel**

Mod, Type (FM), Deviation

```
[:SOURce< n >]:MOD:FSKey[:FREQuency] <frequency>|MINimum|MAXimum  
[:SOURce< n >]:MOD:FSKey[:FREQuency]? [MINimum|MAXimum]
```

### **Description**

Set the alternating frequency ("hop" frequency) of the FSK and the default unit is "Hz".  
The query returns the frequency value in scientific notation.

### **Example**

```
:MOD:FSK 100  
The query returns 1.000000E+02.
```

### **Explanation**

Different carrier waveforms correspond to different frequency ranges<frequency>:

- Sine: 1 µHz to 250 MHz
- Square: 1 µHz to 120 MHz
- Ramp: 1 µHz to 5 MHz

```
[:SOURce< n >]:MOD:FSKey:INTernal:RATE <rate>|MINimum|MAXimum  
[:SOURce< n >]:MOD:FSKey:INTernal:RATE? [MINimum|MAXimum]
```

### **Description**

Set the frequency at which the FSK output frequency "shifts" between the "carrier frequency" and the "hop Frequency". The default unit is "Hz".

The query returns the rate value in scientific notation.

### **Example**

```
:SOUR:MOD:FSK 150  
The query returns 1.500000E+02.
```

### **Explanation**

- This command is only available when internal modulating source is selected.
- <rate>: the frequency range available is from 2 mHz to 1 MHz.

### **Default Value**

100 Hz

```
[:SOURce< n >]:MOD:PWM[:DEViation]:DCYCle <percent>|MINimum|MAXimum  
[:SOURce< n >]:MOD:PWM[:DEViation]:DCYCle? [MINimum|MAXimum]
```

### **Description**

Set the duty cycle deviation namely the variation in duty cycle (expressed in %) of the modulated waveform from the duty cycle of the original pulse waveform.

The query returns the deviation value in scientific notation.

### **Example**

```
:MOD:PWM:DCYC 45%  
The query returns 4.500000E+01.
```

### **Explanation**

Duty cycle <percent> fulfills the following conditions:

- The range available: 0% to 50%
- Duty cycle deviation cannot exceed the current duty cycle deviation.
- Duty cycle deviation is limited by the minimum duty cycle and the current edge time setting.

### **Default Value**

20%

### **Front Panel**

```
[:SOURce< n >]:MOD:PWM[:DEViation][:WIDTh] <deviation>|MINimum|MAXimum  
[:SOURce< n >]:MOD:PWM[:DEViation][:WIDTh]? [MINimum|MAXimum]
```

### **Description**

Set the pulse width deviation namely the variation in width (expressed in seconds) of the modulated waveform from the width of the original pulse waveform.

The query returns the pulse width deviation in scientific notation.

### **Example**

```
:MOD:PWM:DEV:WIDT 0.0002  
The query returns 2.000000E-04.
```

### **Explanation**

The pulse width deviation <deviation> fulfills the following conditions:

- The range available: 0 s to 500 ks.
- The pulse width deviation can not exceed the current pulse width.
- The pulse width deviation is limited by the minimum pulse width and the current edge time setting.

```
[:SOURce< n >]:MOD:IQ:INTernal:RATE <rate>|MINimum|MAXimum  
[:SOURce< n >]:MOD:IQ:INTernal:RATE? [MINimum|MAXimum]
```

### **Description**

Set the transmission rate of the IQ code pattern and the default unit is "bps".  
The query returns the IQ code rate in scientific notation.

### **Example**

```
:MOD:IQ:INT:RATE 100  
The query returns 1.000000E+02.
```

### **Explanation**

- <rate>: the range available is from 1 bps to 1 Mbps.
- This command is available only when internal modulating source is selected.

### **Default Value**

9600 bps

### **Front Panel**

Mod, Type (IQ), Source (Internal), Rate

### **Syntax**

```
[:SOURce< n >]:PERiod[:FIXed] <period>|MINimum|MAXimum  
[:SOURce< n >]:PERiod[:FIXed]? [MINimum|MAXimum]
```

### **Description**

Set the basic waveform period and the default unit is "s".  
The query returns the period value in scientific notation.

### **Example**

```
:PER 0.1  
The query returns 1.000000E-01.
```

### **Explanation**

Different waveforms correspond to different period ranges.

- Sine: 2.8 ns to 1.0000 Ms
- Square: 8.3 ns to 1.0000 Ms
- Ramp: 200.0 ns to 1.0000 Ms
- Pulse: 20.0 ns to 1.0000 Ms
- Arb: 20.0 ns to 1.0000 Ms

### **Syntax**

```
[:SOURce< n >]:PULSe:DCYCle <percent>|MINimum|MAXimum  
[:SOURce< n >]:PULSe:DCYCle? [MINimum|MAXimum]
```

### **Description**

Set the pulse duty cycle, expressed in %.

The query returns the duty cycle value in scientific notation.

### **Example**

```
:PULS:DCYC 60
```

The query returns 6.000000E+01.

### **Explanation**

- Related to the pulse width and changing any one of them will automatically change the other one.
- The pulse duty cycle is limited by the "Minimum Pulse Width (4 ns)" and the "Pulse Period":  
$$\text{Pulse Duty Cycle} \geq 100 \times \text{Minimum Pulse Width} \div \text{Pulse Period}$$
$$\text{Pulse Duty Cycle} \leq 100 \times (1 - 2 \times \text{Minimum Pulse Width} \div \text{Pulse Period})$$

### **Syntax**

```
[:SOURce< n >]:PULSe:DElay <delay>|MINimum|MAXimum  
[:SOURce< n >]:PULSe:DElay? [MINimum|MAXimum]
```

### **Description**

Set the delayed time of the pulse and the default unit is "s".  
The query returns the pulse delay in scientific notation.

### **Example**

```
:PULS:DEL 0.008  
The query returns 8.000000E-03.
```

### **Explanation**

The delay range available is from 0 s to pulse period.

### **Default Value**

0 ns

### **Front Panel**

Pulse, Delay

**↓NEXT**

## **[**:SOURce< n >**]:PULSe:HOLD**

### **Syntax**

```
[:SOURce< n >]:PULSe:HOLD WIDTh|DUTY  
[:SOURce< n >]:PULSe:HOLD?
```

### **Description**

Select to hold at the "Pulse Width" or "Duty Cycle" state.  
The query returns WIDT or DUTY.

### **Example**

```
:PULS:HOLD WIDT  
The query returns WIDT.
```

### **Front Panel**

Pulse, Width/Duty

## **[**:SOURce< n >**]:PULSe:TRANSition[:LEADing]**

### **Syntax**

```
[:SOURce< n >]:PULSe:TRANSition[:LEADing] <seconds>|MINimum|MAXimum  
[:SOURce< n >]:PULSe:TRANSition[:LEADing]? [MINimum|MAXimum]
```

### **Description**

Set the rising edge of the pulse and the default unit is "s".

The query returns the time value in scientific notation and the default unit is "s".

### **Example**

```
:PULS:TRAN 0.000001  
The query returns 1.000000E-06.
```

### **Explanation**

- The range of the rising edge time is from 2.5 ns to 1 ms and is divided into 5 scales:  
2.5 ns to 12 ns;  
12.2 ns to 108 ns;  
108.1 ns to 2.2 us;  
2.2001 us to 38.5 us;  
38.5 us to 1 ms.
- Related to the setting of the trailing edge and the two must at the same scale.

## **[**:SOURce< n >**]:**SWEep:TIME****

### **Syntax**

```
[:SOURce< n >]:SWEep:TIME <seconds>|MINimum|MAXimum  
[:SOURce< n >]:SWEep:TIME? [MINimum|MAXimum]
```

### **Description**

Set the sweep time and the default unit is "s".  
The query returns the time value in scientific notation.

### **Example**

```
:SWE:TIME 5  
The query returns 5.000000E+00.
```

### **Explanation**

The range available is from 1 ms to 300 s.

### **Default Value**

1 s

### **Front Panel**

Sweep, SwpTime

**↓ NEXT**

## **[:SOURce<n>]:SWEep:TRIGger[:IMMEDIATE]**

### **Syntax**

**[:SOURce<n>]:SWEep:TRIGger[:IMMEDIATE]**

### **Description**

Trigger the instrument immediately.

### **Explanation**

This command is only valid when the trigger source is in manual mode.

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:**SWEep:TRIGger:SLOPe****

### **Syntax**

```
[:SOURce< n >]:SWEep:TRIGger:SLOPe POSitive|NEGative  
[:SOURce< n >]:SWEep:TRIGger:SLOPe?
```

### **Description**

Select to enable the frequency sweep output on the "Leading" or "Trailing" edge of the external trigger signal.

### **Example**

```
:SWE:TRIG:SLOP NEG  
The query returns NEG.
```

### **Explanation**

This command is only valid when external trigger source is selected.

### **Default Setting**

POS (Leading)

### **Front Panel**

Sweep, Source (External), SlopeIn

**↓ NEXT**

## **[**:SOURce< n >**]:**SWEep:TRIGger:TRIGOut****

### **Syntax**

**[**:SOURce< n >**]:**SWEep:TRIGger:TRIGOut** OFF|POSiTive|NEGatiVe  
[**:SOURce< n >**]:**SWEep:TRIGger:TRIGOut?****

### **Description**

Set the output edge of the sweep trigger.  
The query returns OFF, POS or NEG.

### **Explanation**

- OFF: disable the trigger output signal.  
POSiTive (Leading): output the trigger signal on the rising edge.  
NEGatiVe (Trailing): output the trigger signal on the falling edge.
- Valid when the trigger source is "Internal" or "External".

### **Default Setting**

OFF

### **Front Panel**

Sweep, Source (Internal or Manual), TrigOut

## **[**:SOURce< n >**]:SWEep:TRIGger:SOURce**

### **Syntax**

**[**:SOURce< n >**]:SWEep:TRIGger:SOURce INTernal|EXTernal|MANual  
[:SOURce< n >]:SWEep:TRIGger:SOURce?**

### **Description**

Select the sweep trigger source type.  
The query returns INT, EXT or MAN.

### **Default Setting**

INTernal (Internal)

### **Front Panel**

Sweep, Source

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:VOLTage[:LEVel][:IMMEDIATE]:HIGH**

### **Syntax**

```
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE]:HIGH <voltage>|MINimum|MAXimum  
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE]:HIGH? [MINimum|MAXimum]
```

### **Description**

Set the high level of the basic waveform and the default unit is "V".  
The query returns the high level value in scientific notation.

### **Example**

```
:VOLT:HIGH 5  
The query returns 5.000000E+00.
```

### **Explanation**

Upper limit: 10 V (High Z)/5 V (50 Ω)  
Lower limit: must be higher than the low level

### **Default Value**

2.5 V

### **Front Panel**

Sine/Square/Ramp/Pulse/Noise/Arb, Ampl/HoLevel

**↓ NEXT**

## **[**:SOURce< n >**]:VOLTage[:LEVel][:IMMEDIATE]:LOW**

### **Syntax**

```
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE]:LOW <voltage>|MINimum|MAXimum  
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE]:LOW? [MINimum|MAXimum]
```

### **Description**

Set the low level of the basic waveform and the default unit is "V".  
The query returns the low level value in scientific notation.

### **Example**

```
:VOLT:LOW -2  
The query returns -2.000000E+00.
```

### **Explanation**

Lower limit: -10 V (High Z)/-5 V (50 Ω)  
Upper limit: must be lower than the high level

### **Default Value**

-2.5 V

### **Front Panel**

Sine/Square/Ramp/Pulse/Noise/Arb, Offset/LoLevel

**↓NEXT**

## **[**:SOURce< n >**]:VOLTage[:LEVel][:IMMEDIATE]:OFFSet**

### **Syntax**

```
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE]:OFFSet <voltage>|MINimum|MAXimum  
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE]:OFFSet? [MINimum|MAXimum]
```

### **Description**

Set the DC offset voltage and the default unit is "Vdc".  
The query returns the offset voltage value in scientific notation.

### **Example**

```
:VOLT:OFFS 0.1  
The query returns 1.000000E-01.
```

### **Explanation**

The offset range is limited by the "Resistance" and "Ampl/HoLevel" settings. For details, please refer to the User's Guide of this product.

### **Default Value**

0 Vdc

### **Front Panel**

Sine/Square/Ramp/Pulse/Noise/Arb, Offset/LoLevel

**↑ PREV**

**↓ NEXT**

## **[**:SOURce< n >**]:VOLTage[:LEVel][:IMMEDIATE][:AMPLitude]**

### **Syntax**

```
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE][:AMPLitude] <amplitude>|MINimum|MAXimum  
[:SOURce< n >]:VOLTage[:LEVel][:IMMEDIATE][:AMPLitude]? [MINimum|MAXimum]
```

### **Description**

Set the basic waveform amplitude and the default unit is "Vpp".  
The query returns the amplitude value in scientific notation.

### **Example**

```
:VOLT 2.5  
The query returns 2.500000E+00.
```

### **Explanation**

The amplitude is limited by the "Resistance" and "Freq/Period" settings. For details, please refer to the User's Guide of this product.

### **Default Value**

5 Vpp

### **Front Panel**

Sine/Square/Ramp/Pulse/Noise/Arb, Ampl/HoLevel

**↓NEXT**

## **[**:SOURce< n >**]:VOLTage:RANGe:AUTO**

### **Syntax**

```
[:SOURce< n >]:VOLTage:RANGe:AUTO OFF|ON  
[:SOURce< n >]:VOLTage:RANGe:AUTO?
```

### **Description**

Enable or disable the range hold.  
The query returns AUTO or HOLD.

### **Example**

```
:VOLT:RANG:AUTO ON  
The query returns AUTO.
```

### **Explanation**

- ON (AUTO): disable the range hold and enable automatic optimization. The generator select the best setting for the output amplifier and attenuator.
- OFF (HOLD): enable the range hold and disable automatic optimization to eliminate the waveform incontinuity caused by turning on/off the relay when altering the amplitude, but the amplitude precision might be affected.

### **Default Setting**

OFF (HOLD)

### **Syntax**

**[**:SOURce< n >**]:VOLTage:UNIT VPP|VRMS|DBM  
[:SOURce< n >]:VOLTage:UNIT?**

### **Description**

Set the amplitude unit.  
The query returns VPP, VRMS or DBM.

### **Example**

**:VOLT:UNIT VRMS**

### **Explanation**

- VPP: peak-peak value;  
VRMS: effective value;  
DBM: relative value.
- DBM is not available when the output is High Z.

### **Front Panel**

Sine/Square/Ramp/Pulse/Noise/Arb, Ampl/HoLevel

```
:SYST:ROSC:SOUR EXT  
The query returns EXT.
```

### **Default Setting**

INTernal

### **Front Panel**

Utility, System, CLK

 PREV

 NEXT

## **:SYSTem:ERRor?**

### **Syntax**

`:SYSTem:ERRor?`

### **Description**

Query the error event queue.

### **Return Value**

The query returns the error event information. For example: -220, "Parameter error". If there is no error, the query returns: 0, "No Error".

 **PREV**

**NEXT** 

## **:SYSTem:KLOCK**

### **Syntax**

```
:SYSTem:KLOCK[:STATe] ON|OFF  
:SYSTem:KLOCK[:STATe]?
```

### **Description**

Lock or unlock the front panel remotely.  
The query returns ON or OFF.

### **Example**

```
:SYST:KLOC ON  
The query returns ON.
```

### **Explanation**

ON: the front panel is locked and the "🔒" icon is displayed at the upper right side of the screen.

**↑ PREV**

**↓ NEXT**

## **:SYSTem:LANGuage**

### **Syntax**

:SYSTem:LANGuage ENGLish|SCHinese  
:SYSTem:LANGuage?

### **Description**

Set the system language type: English or Simplified Chinese.  
The query returns ENGL or SCH.

### **Example**

:SYST:LANG ENGL  
The query returns ENGL.

### **Front Panel**

Utility, System, Language

 PREV

 NEXT

## **:SYSTem:CSCopy**

### **Syntax**

:SYSTem:CSCopy CH1,CH2|CH2,CH1.

### **Description**

Copy the parameter configuration of CH1 (CH2) to CH2 (CH1).

### **Example**

:SYST:CSC CH1,CH2

### **Explanation**

- Only available for dual-channel instruments.
- Invalid in coupling mode.

### **Front Panel**

Utility, Copy Channel

PREV

## **:SYSTem:COMMunicate:LAN:AUTOip[:STATe]**

### **Syntax**

```
:SYSTem:COMMunicate:LAN:AUTOip[:STATe] ON|OFF  
:SYSTem:COMMunicate:LAN:AUTOip[:STATe]?
```

### **Description**

Turn the AutoIP mode on/off.  
The query returns ON or OFF.

### **Example**

```
:SYST:COMM:LAN:AUTO ON  
The query returns ON.
```

### **Explanation**

- In this mode, the generator acquires IP address within 169.254.0.1 and 169.254.255.254 and subnet mask 255.255.0.0 automatically based on the current network configuration.
- Set the DHCP to "Off" to enable this mode.

### **Front Panel**

Utility, I/O Setup, LAN, AutoIP

## **:SYST:COMM:LAN:STATic[:STATE]**

### **Syntax**

```
:SYST:COMM:LAN:STATic[:STATE] ON|OFF  
:SYST:COMM:LAN:STATic[:STATE]?
```

### **Description**

Turn the ManualIP mode on/off.  
The query returns ON or OFF.

### **Example**

```
:SYST:COMM:LAN:STAT ON  
The query returns ON.
```

### **Explanation**

- In this mode, users define the network parameters such as the IP address of the signal generator.
- Set DHCP and AutoIP to "Off" to enable this mode.

### **Front Panel**

Utility, I/O Setup, LAN, AutoIP

 PREV

 NEXT

## **:SYST:COMM:LAN:IPADDress**

### **Syntax**

```
:SYST:COMM:LAN:IPADDress <ip_addr>  
:SYST:COMM:LAN:IPADDress?
```

### **Description**

Set the IP address for the signal generator.

The query returns the IP address in nnn.nnn.nnn.nnn format.

### **Example**

```
:SYST:COMM:LAN:IPAD 192.168.1.88
```

The query returns 192.168.1.88.

### **Explanation**

- <ip\_addr> is the IP address to be set and the format is nnn.nnn.nnn.nnn. The range of the first nnn is from 0 to 223 (except 127). The range of the other three nnn is from 0 to 255.
- The setting is stored in the non-volatile memory and will be loaded automatically when the generator is powered on the next time if DHCP and AutoIP are set as "Off".

### **Front Panel**

Utility, I/O Setup, LAN, ManualIP (ON), IP Address

**↑ PREV**

## **:SYSTem:COMMunicate:LAN:SMASK**

### **Syntax**

```
:SYSTem:COMMunicate:LAN:SMASK <mask>
:SYSTem:COMMunicate:LAN:SMASK?
```

### **Description**

Set the subnet mask for the signal generator.  
The query returns the subnet mask in nnn.nnn.nnn.nnn format.

### **Example**

```
SYST:COMM:LAN:SMAS 255.255.255.0
The query returns 255.255.255.0.
```

### **Explanation**

- <mask> is the subnet mask to be set and the format is nnn.nnn.nnn.nnn, where the range of nnn is from 0 to 255.
- This setting is stored in the non-volatile memory and will be automatically loaded when the generator is powered on next time if DHCP and AutoIP are "Off".

### **Front Panel**

Utility, I/O Setup, LAN, ManualIP (ON), SubMask

## **:SYST:COMM:LAN:GATEway**

### **Syntax**

```
:SYST:COMM:LAN:GATEway <address>
:SYST:COMM:LAN:GATEway?
```

### **Description**

Set the default gateway for the signal generator.  
The query returns the default gateway in nnn.nnn.nnn.nnn format.

### **Example**

```
:SYST:COMM:LAN:GATE 192.168.1.1
The query returns 192.168.1.1.
```

### **Explanation**

- <address> is the default gateway to be set and the format is nnn.nnn.nnn.nnn, The range of the first nnn is from 0 to 223 (except 127), The range of the other three nnn is from 0 to 255.
- This setting is stored in the non-volatile memory and will be automatically loaded when the generator is powered on next time if DHCP and AutoIP are "Off".

### **Front Panel**

Utility, I/O Setup, LAN, ManualIP (ON), Default Gateway

## **:SYST:COMM:LAN:HOSTname**

### **Syntax**

```
:SYST:COMM:LAN:HOSTname <name>  
:SYST:COMM:LAN:HOSTname?
```

### **Description**

Set the host name for the signal generator.  
The query returns the host name.

### **Example**

```
:SYST:COMM:LAN:HOST RigolDG5000  
The query returns RIGOLDG5000.
```

### **Explanation**

- <name> is the host name to be set and can include letters, numbers, dot and dash with up to 16-character length.
- This setting is stored in non-volatile memory.

## **:SYST:COMM:LAN:DNS**

### **Syntax**

**:SYST:COMM:LAN:DNS <address>**  
**:SYST:COMM:LAN:DNS?**

### **Description**

Set the DNS server address for the signal generator.  
The query returns the DNS server address in nnn.nnn.nnn.nnn format.

### **Example**

**:SYST:COMM:LAN:DNS 202.106.46.151**  
The query returns 202.106.46.151.

### **Explanation**

- <address> is the DNS server address to be set and the format is nnn.nnn.nnn.nnn, The range of the first nnn is from 0 to 223 (except 127), The range of the other three nnn is from 0 to 255.
- This setting is stored in non-volatile memory.

## **:SYST:COMM:GPIB[:SELF]:ADDRess**

### **Syntax**

```
:SYST:COMM:GPIB[:SELF]:ADDRess <integer>
:SYST:COMM:GPIB[:SELF]:ADDRess?
```

### **Description**

Set the GPIB address for the signal generator.  
The query returns the value from 0 to 30.

### **Example**

```
:SYST:COMM:GPIB:SELF:ADDRess 2
The query returns 2.
```

### **Explanation**

- <integer> is the GPIB address to be set and the range is from 0 to 30.
- The address selected is stored in non-volatile memory.

### **Front Panel**

## **[:TRACe]:DATA[:DATA]**

### **Syntax**

`[:TRACe]:DATA[:DATA] VOLATILE,<value>{,<value>}`

### **Description**

Download floating point voltage value into the volatile memory. The range of the number of the floating points is from -1 to +1 and the data length can not exceed 512 kpts.

### **Example**

`:DATA VOLATILE,-0.6,-0.5,-0.4,-0.3,-0.2,-0.1,0,0.1,0.2,0.3,0.4,0.5,0.6`

### **Explanation**

After the command is sent, the instrument will switch the current channel to output volatile waveform automatically and modify the interpolation mode and the number of editable points at the same time. The data downloaded using this command can be edited on the instrument.

**↑ PREV**

**↓ NEXT**

## [**:TRACe**]:DATA:DAC16

### Syntax

[**:TRACe**]:DATA:DAC16 VOLATILE,<flag>,<binary\_block\_data>

### Description

Download the waveform edited into the DDRII.

### Explanation

- This command consists of two parts. The first part is the command character string ([**:TRACe**]:DATA:DAC16 VOLATILE,<flag>,) and the second part is the binary data to be downloaded (<binary\_block\_data>).
- <flag> represents the data transmission state and can be set to CON or END. "CON": there are still data packets after the current one; "END": this is the last data packet and the data transmission is finished.
- <binary\_block\_data> is the binary data to be downloaded and the range is from 0000 to 3FFF. The data length must be 16 kpts (32 kBytes).

The binary data block starts with #.

For example, send :**DATA:DAC16 VOLATILE,CON,#532768binary data**

The number **5** following # represents that the data length information **32768** holds 5 characters and **32768** represents the number of bytes of the **binary data**. As each waveform point holds two bytes, the number of bytes must be an even number.

- When the <flag> in the command received is END, the instrument will automatically switch to arbitrary waveform output.
- If the total length of the waveform to be downloaded is 16 kpts and the waveform is downloaded into the instrument in one operation, users can edit the data on the instrument. Otherwise, local editing is not supported.

 PREV

 NEXT

## [**:TRACe**]:DATA:DAC

### Syntax

[**:TRACe**]:DATA:DAC VOLATILE,[<binary\_block\_data>|<value>,<value>,<value>...]

### Description

Send binary data block or decimal DAC value to the volatile memory.

### Explanation

- <binary\_block\_data> is the binary data to be sent. The range is from 0000 to 3FFF and the data length is 4 Bytes (2 pts) to 32768 Bytes (16 kpts). The binary data block starts with #.

For example, send :**DATA:DAC VOLATILE,#516384**binary data

The number **5** following # represents that the data length information **16384** holds 5 characters and **16384** represents the number of bytes of the **binary data**. As each waveform point holds two bytes, the number of bytes must be an even number.

- <value>,<value>,<value>...: when the data does not start with #, the decimal DAC value can be sent in character string format.

For example, send :**DATA:DAC VOLATILE,0,16883,8192,0,16383**

5 data points are sent totally.

- For data with less than 16384 points, the instrument will extend the data to 16384 points using uniform interpolation automatically.
- After this command is sent, the instrument will switch the current channel to output volatile waveform automatically and modify the interpolation mode and the number of editable points. The data downloaded using this command can be edited on the instrument.

 NEXT

## **[:TRACe]:DATA:VALue**

### **Syntax**

**:TRACe]:DATA:VALue VOLATILE,<point>,<data>**

### **Description**

Modify the decimal interger value of a certain point in the volatile memory.

### **Example**

**:DATA:VAL VOLATILE,2,8192**

Modify the second point to the decimal number 8192.

### **Explanation**

- <point>: the point to be modified;
- <data>: a decimal data and the range is from 0 to 16383.
- This command is only available when the current output waveform is arbitrary waveform and the type of the arbitrary waveform is volatile.

 **PREV**

**NEXT** 

## **[:TRACe]:DATA:VALue?**

### **Syntax**

`[:TRACe]:DATA:VALue? VOLATILE,<point>`

### **Description**

Query the decimal integer value of a certain point in the volatile memory.  
The query returns a decimal value and the range is from 0 to 16383.

### **Example**

`:DATA:VAL? VOLATILE,2`

The query returns 4095.

### **Explanation**

- <point> is the point to be queried.
- This command is only available when the current output waveform is arbitrary waveform and the type of the arbitrary waveform is volatile.

 PREV

 NEXT

## **[:TRACe]:DATA:LOAD?**

### **Syntax**

```
[:TRACe]:DATA:LOAD? VOLATILE  
[:TRACe]:DATA:LOAD? <num>
```

### **Description**

Query the number of arbitrary waveform data packets in the volatile memory.  
Read the specified data packet in the volatile memory.

### **Explanation**

First, send the [:TRACe]:DATA:LOAD? VOLATILE command to query the number of arbitrary waveform data packets in the volatile memory and the query returns a decimal value.  
The length of each data packet is 32768 Bytes. The query returns 1 if the length of the current arbitrary waveform is 32768 Bytes.

Then, send the [:TRACe]:DATA:LOAD? <num> command to read the data in the num<sup>th</sup> data packet, wherein, the range of <num> is from 1 to the number of data packets.  
For example, send the :DATA:LOAD? 1 command to get the first data packet (start with #, then the number of characters of the data length information, then the data length information and finally the data) with 32768 Bytes length in the volatile memory.

**↑ PREV**

**↓ NEXT**

## **[:TRACe]:DATA:POINts**

### **Syntax**

```
[{:TRACe}]:DATA:POINts VOLATILE,<value>|MINimum|MAXimum  
[:TRACe]:DATA:POINts? VOLATILE[,MINimum|MAXimum]
```

### **Description**

Set the number of the initial points.

Query the number of the initial points of the edited waveform.

### **Explanation**

- The range of <value> is from 2 to 524288.
- After this command is sent, the instrument will switch to arbitrary waveform (volatile waveform) output mode automatically and initialize the volatile waveform to waveform with the specified number of points and 0 amplitude. At this point, you can send the [\[:TRACe\]:DATA:VALue](#) command to set the amplitude of the specified point.

### **Return Value**

The query returns an integer between 2 and 524288 representing the number of the initial points of the edited waveform.

### **Front Panel**

Arb, Create New, Init #Points

 PREV

 NEXT

## **[:TRACe]:DATA:POINts:INTerpolate**

### **Syntax**

```
:TRACe]:DATA:POINts:INTerpolate LINear|SINC|OFF  
[:TRACe]:DATA:POINts:INTerpolate?
```

### **Description**

Set the interpolation mode between the defined points of the waveform.  
The query returns LINEAR, SINC or OFF.

### **Example**

```
:DATA:POIN:INT LIN  
The query returns LINEAR.
```

### **Explanation**

- LINear: the waveform editor will connect the two defined points with a straight line.
- SINC: the waveform editor will connect the two points with a smooth curve.
- OFF: turn off the interpolation. The waveform editor will hold a constant voltage level between two points and create a step waveform.
- This command is only available when the instrument is in arbitrary waveform output mode and the type of the arbitrary waveform is volatile.

## **Programming Demos**

This chapter lists some programming demos to illustrate how to use commands to realize the common functions of the generator in the development environments of Visual C++ 6.0, Visual Basic 6.0 and LabVIEW 8.6. All demos are based on NI (National Instrument)-VISA (Virtual Instrument Software Architecture).

NI-VISA is an API (application programming interface) written by NI on the basis of VISA standards. You can use NI-VISA to realize the communication between the generator and the PC via instrument buses such as USB. As VISA has defined a set of software commands, users can control the instrument without understanding the working state of the interface bus. For more details, please refer to NI-VISA help.

Topics of this chapter:

## Programming Preparations

First make sure your computer has installed the VISA library of NI (download it from <http://www.ni.com/visa/>). Here, the default installation path is C:\Program Files\IVI Foundation\VISA.

Here, the USB Device interface of the generator is used to communicate with the PC and please use the USB cable to connect the USB Device interface at the rear panel of the generator to the USB interface of the PC.

After successful connection, turn on the instrument. A "**Found New Hardware Wizard**" dialog box appears on the PC at the first connection. Please follow the instructions to install the "USB Test and Measurement Device" (the installation procedures are as follows).

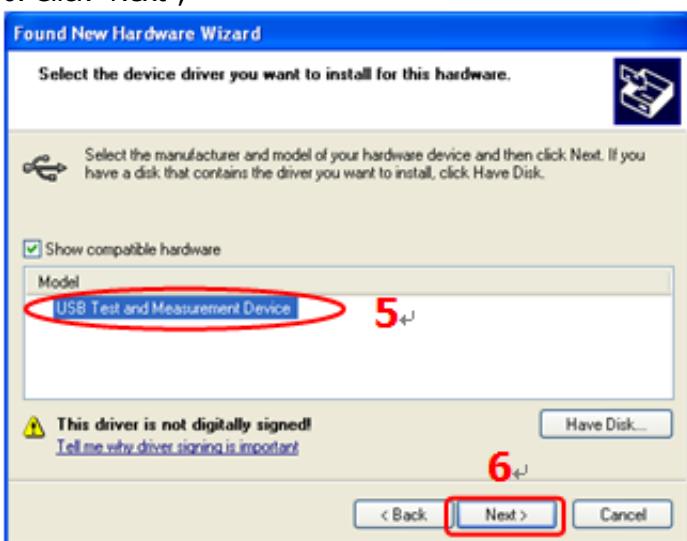

1. Select "Install from a list or specific location (Advanced)";
2. Click "Next";

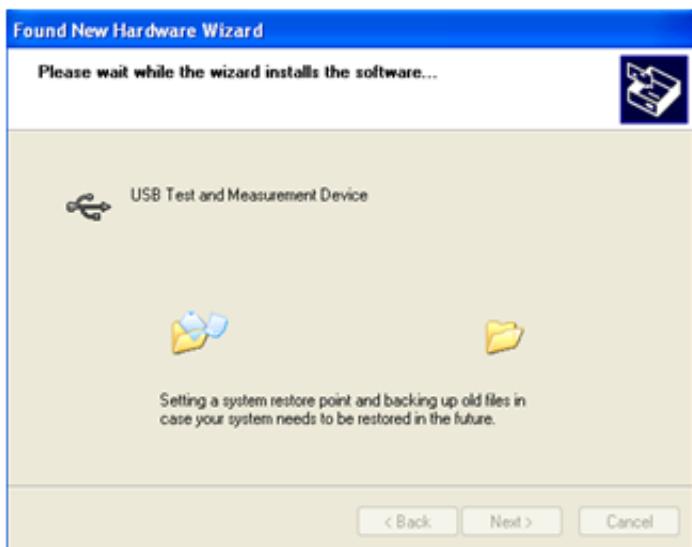

3. Select "Do not search. I will choose the device to install.";
4. Click "Next";

5. Select "USB Test and Measurement Device";
6. Click "Next";

7. When the installation finishes, click "Finish".

By now, the programming preparations are finished. In the following part, the programming demos in Visual C++ 6.0, Visual Basic 6.0 and LabVIEW 8.6 development environments are introduced in detail.

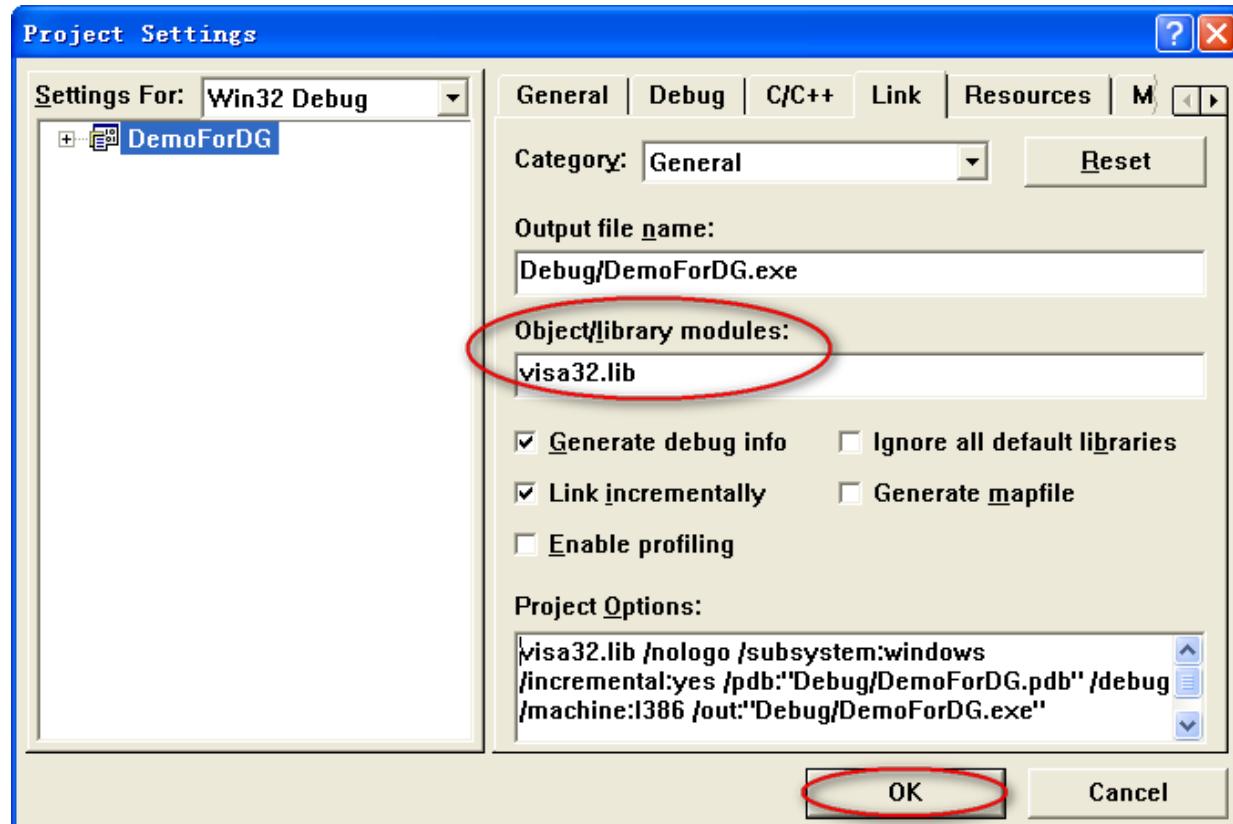

**↑ PREV**

**↓ NEXT**

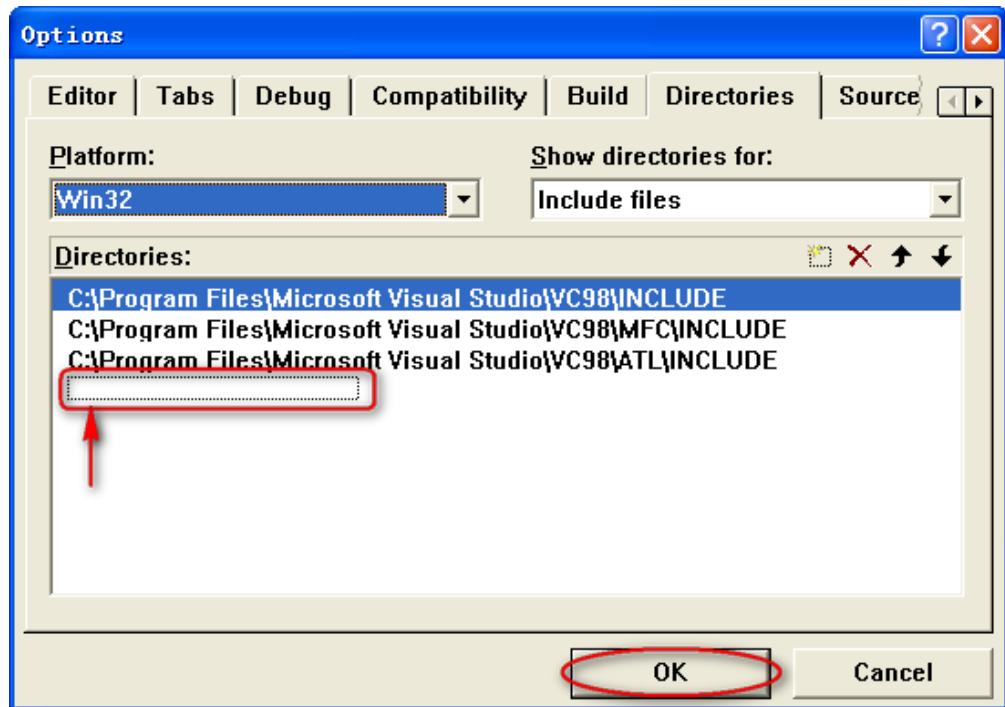

## Visual C++ 6.0 Programming Demo

Enter the Visual C++ 6.0 programming environment and follow the steps below.

1. Build a MFC project based on dialog box.
2. Open the **Link** tab in **Project→Settings** and add **visa32.lib** to the **Object/library modules** manually.

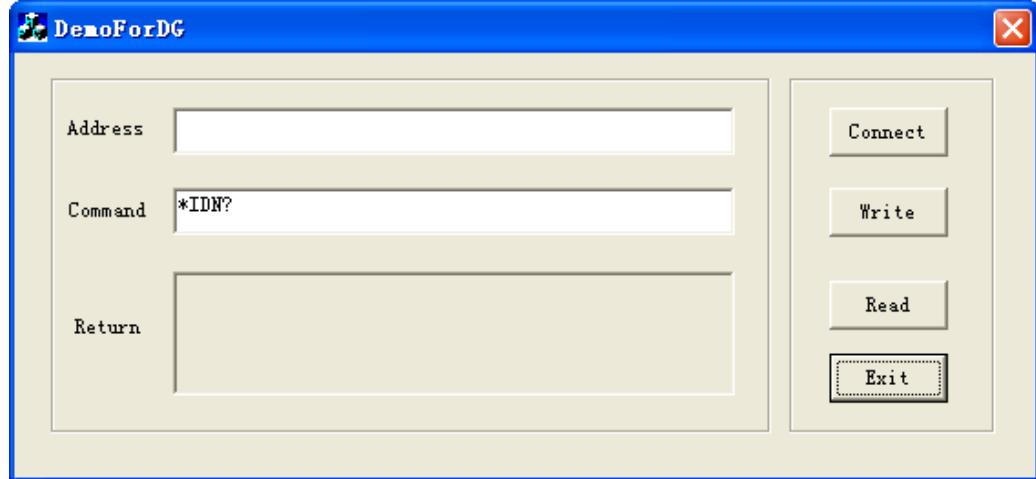

3. Open the **Directories** tab in **Tools→Options**.  
Select **Include files** in **Show directories for** and double-click at the place pointed out by the red arrow in **Directories** to add the path of **Include:** C:\Program Files\IVI Foundation\VISA\WinNT\include.  
Select **Library files** in **Show directories for** and double-click at the place pointed out by the red arrow in **Directories** to add the path of **Lib:** C:\Program Files\IVI Foundation\VISA\WinNT\lib\msc.

Note: at present, VISA library has been added.

4. Add the **Text**, **Edit** and **Button** controls as shown in the figure below.

5. Add the control variables.

Open the **Member Variables** tab in **View→ClassWizard** and add the following three variables:

Instrument address: CString m\_strInstrAddr

Command: CString m\_strCommand

Return Value: CString m\_strResult

6. Encapsulate the read and write operations of VISA.

1) Encapsulate the write operation of VISA for easier operation.

```
bool CDemoForDGDlg::InstrWrite(CString strAddr, CString strContent) //Write //operation
{
```

```

ViSession defaultRM,instr;
ViStatus status;
ViUInt32 retCount;
char * SendBuf = NULL;
char * SendAddr = NULL;
bool bWriteOK = false;
CString str;

// Change the address's data style from CString to char*
SendAddr = strAddr.GetBuffer(strAddr.GetLength());
strcpy(SendAddr,strAddr);
strAddr.ReleaseBuffer();

// Change the command's data style from CString to char*
SendBuf = strContent.GetBuffer(strContent.GetLength());
strcpy(SendBuf,strContent);
strContent.ReleaseBuffer();

//open a VISA resource
status = viOpenDefaultRM(&defaultRM);
if (status < VI_SUCCESS)
{
    AfxMessageBox("No VISA resource was opened!");
    return false;
}

status = viOpen(defaultRM, SendAddr, VI_NULL, VI_NULL, &instr);

//Write command to the instrument
status = viWrite(instr, (unsigned char *)SendBuf, strlen(SendBuf), &retCount);

//Close the system
status = viClose(instr);
status = viClose(defaultRM);

return bWriteOK;
}

```

2) Encapsulate the read operation of VISA for easier operation.

```

bool CDemoForDGDlg::InstrRead(CString strAddr, CString *pstrResult) //Read //operation
{
    ViSession defaultRM,instr;
    ViStatus status;
    ViUInt32 retCount;
    char * SendAddr = NULL;
    unsigned char RecBuf[MAX_REC_SIZE];
    bool bReadOK = false;
    CString str;

    // Change the address's data style from CString to char*
    SendAddr = strAddr.GetBuffer(strAddr.GetLength());
    strcpy(SendAddr,strAddr);
    strAddr.ReleaseBuffer();

```

```

memset(RecBuf,0,MAX_REC_SIZE);

//Open a VISA resource
status = viOpenDefaultRM(&defaultRM);
if (status < VI_SUCCESS)
{
    // Error Initializing VISA...exiting
    AfxMessageBox("No VISA resource was opened!");
    return false;
}

//Open the instrument
status = viOpen(defaultRM, SendAddr, VI_NULL, VI_NULL, &instr);

//Read from the instrument
status = viRead(instr, RecBuf, MAX_REC_SIZE, &retCount);

//close the system
status = viClose(instr);
status = viClose(defaultRM);

(*pstrResult).Format("%0s",RecBuf);

return bReadOK;
}

```

**7.** Add the control message response codes.

```

1) Connect to the instrument
void CDemoForDGDlg::OnBtConnectInstr()      // Connect to the instrument
{
    // TODO: Add your control notification handler code here
    ViStatus status;
    ViSession defaultRM;
    ViString expr = "?*";
    ViPFindList findList = new unsigned long;
    ViPUInt32 retcnt = new unsigned long;
    ViChar instrDesc[1000];
    CString strSrc = "";
    CString strInstr = "";
    unsigned long i = 0;
    bool bFindDG = false;

    status = viOpenDefaultRM(&defaultRM);
    if (status < VI_SUCCESS)
    {
        // Error Initializing VISA...exiting
        MessageBox("No VISA instrument was opened ! ");
        return ;
    }

    memset(instrDesc,0,1000);

    // Find resource
    status = viFindRsrc(defaultRM,expr,findList, retcnt, instrDesc);
}

```

```

for (i = 0;i < (*retcnt);i++)
{
    // Get instrument name
    strSrc.Format("%s",instrDesc);
    InstrWrite(strSrc,"*IDN?");
    ::Sleep(200);
    InstrRead(strSrc,&strInstr);

    // If the instrument(resource) belongs to the DG series then jump out //from the loop
    strInstr.MakeUpper();
    if (strInstr.Find("DG") >= 0)
    {
        bFindDG = true;
        m_strInstrAddr = strSrc;
        break;
    }

    //Find next instrument
    status = viFindNext(*findList,instrDesc);
}

if (bFindDG == false)
{
    MessageBox("Didn't find any DG!");
}
UpdateData(false);
}

```

## 2) Write Operation

```

void CDemoForDGDlg::OnBtWrite()           //Write operation
{
    // TODO: Add your control notification handler code here

    UpdateData(true);

    if (m_strInstrAddr.IsEmpty())
    {
        MessageBox("Please connect to the instrument first!");

    }

    InstrWrite(m_strInstrAddr,m_strCommand);

    m_strResult.Empty();

    UpdateData(false);
}

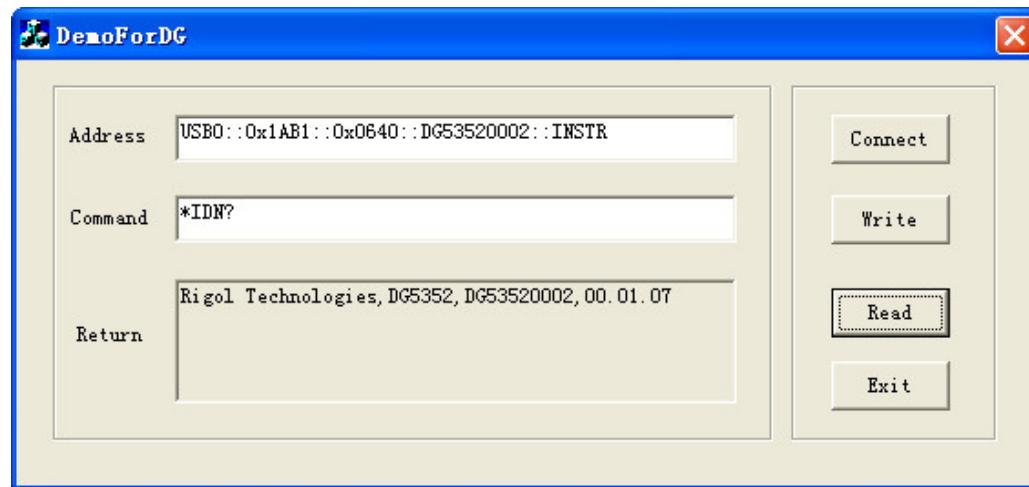

```

```
3) Read Operation
void CDemoForDGDlg::OnBtRead() //Read operation
{
    // TODO: Add your control notification handler code here
    UpdateData(true);
    InstrRead(m_strInstrAddr,&m_strResult);
    UpdateData(false);
}
```

#### 8. Execution Result

- 1) Click "Connect" to search for the generator;
- 2) Input "\*IDN?" in the "Command" edit box;
- 3) Click "Write" to write the command into the generator;
- 4) Click "Read" to read the return value.

The execution result is as shown in the figure below.

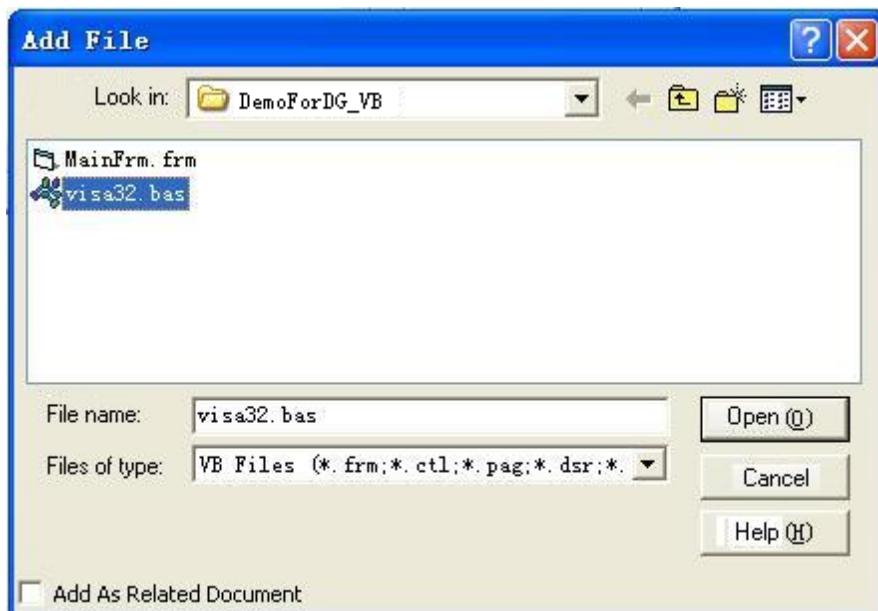

[↑ PREV](#)

[↓ NEXT](#)

## Visual Basic 6.0 Programming Demo

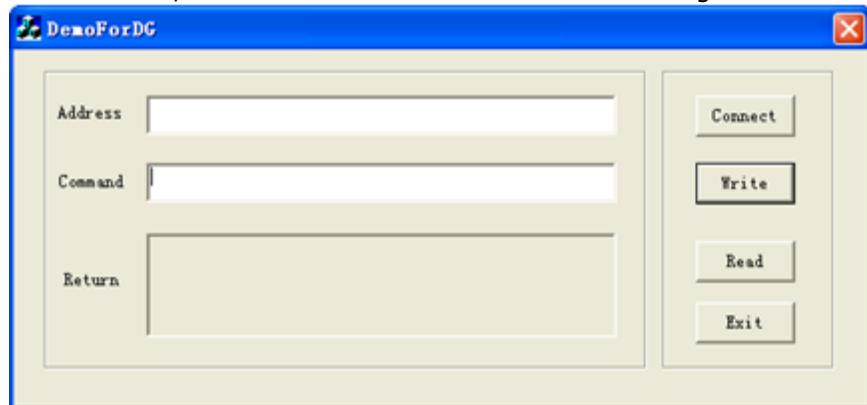

Enter the Visual Basic 6.0 programming environment and follow the steps below.

1. Build a standard application program project (Standard EXE).
2. Open **Project→Add File...** and add **visa32.bas** which contains all VISA functions and constant statements to the project.

Then add the **Declare Sub Sleep Lib "kernel32" (ByVal dwMilliseconds As Long)** statement into the **visa32.bas**, or create a new module to declare the **Sleep** function.

3. Add the **Text**, **Edit** and **Button** controls as shown in the figure below.

4. Encapsulate the write and read operations of VISA.
  - 1) Encapsulate the write operation of VISA for easier operation.

```

'-----  

'Function Name : InstrWrite  

'Function : Send command to the instrument  

'Input : rsrcName,instrument(resource) name  

    strCmd,Command  

'-----  

Public Sub InstrWrite(rsrcName As String, strCmd As String)  

    Dim status As Long  

    Dim dfltRM As Long  

    Dim sesn As Long  

    Dim rSize As Long  

    'Initialize the system  

    status = viOpenDefaultRM(dfltRM)  

    'Failed to initialize the system  

    If (status < VI_SUCCESS) Then  

        MsgBox " No VISA resource was opened ! "  

        Exit Sub  

    End If  

    'Open the VISA instrument  

    status = viOpen(dfltRM, rsrcName, VI_NULL, VI_NULL, sesn)  

    'Failed to open the instrument  

    If (status < VI_SUCCESS) Then  

        MsgBox "Failed to open the instrument ! "  

        Exit Sub  

    End If  

    'Write command to the instrument  

    status = viWrite(sesn, strCmd, Len(strCmd), rSize)  

    'Failed to write to the instrument  

    If (status < VI_SUCCESS) Then  

        MsgBox " Failed to write to the instrument ! "  

        Exit Sub  

    End If  

    'Close the system  

    status = viClose(sesn)  

    status = viClose(dfltRM)  

End Sub

```

2) Encapsulate the read operation of VISA for easier operation.

```

'-----  

'Function Name : InstrRead  

'Function : Read the return value from the instrument  

'Input : rsrcName,Resource name  

'Return : The string gotten from the instrument

```

```

Public Function InstrRead(rsrcName As String) As String
    Dim status As Long
    Dim dfltRM As Long
    Dim sesn As Long
    Dim strTemp0 As String * 256
    Dim strTemp1 As String
    Dim rSize As Long

    'Begin by initializing the system
    status = viOpenDefaultRM(dfltRM)
    'Initial failed
    If (status < VI_SUCCESS) Then
        MsgBox "Failed to open the instrument!"
        Exit Function
    End If
    'Open the instrument
    status = viOpen(dfltRM, rsrcName, VI_NULL, VI_NULL, sesn)
    'Open instrument failed
    If (status < VI_SUCCESS) Then
        MsgBox "Failed to open the instrument!"
        Exit Function
    End If

    ' Read from the instrument
    stasus = viRead(sesn, strTemp0, 256, rSize)
    ' Read failed
    If (status < VI_SUCCESS) Then
        MsgBox "Failed to read from the instrument!"
        Exit Function
    End If

    'Close the system
    status = viClose(sesn)
    status = viClose(dfltRM)

    ' Remove the space at the end of the string
    strTemp1 = Left(strTemp0, rSize)
    InstrRead = strTemp1
End Function

```

5. Add the control event codes.
- 1) Connect to the instrument
- ```

'Connect to the instrument
Private Sub CmdConnect_Click()
    Const MAX_CNT = 200
    Dim status As Long
    Dim dfltRM As Long
    Dim sesn As Long

```

```

Dim fList As Long
Dim buffer As String * MAX_CNT, Desc As String * 256
Dim nList As Long, retCount As Long
Dim rsrcName(19) As String * VI_FIND_BUflen, instrDesc As String * VI_FIND_BUflen
Dim i, j As Long
    Dim strRet As String
Dim bFindDG As Boolean

'Initialize the system
status = viOpenDefaultRM(dfltRM)
' Initialize failed
If (status < VI_SUCCESS) Then
    MsgBox " No VISA resource was opened ! "
    Exit Sub
End If

' Find instrument resource
Call viFindRsrc(dfltRM, "USB?*INSTR", fList, nList, rsrcName(0))
' Get the list of the instrument(resource)
strRet = ""
bFindDG = False
For i = 0 To nList - 1
    ' Get the instrument name
    InstrWrite rsrcName(i), "*IDN?"
    Sleep 200
    strRet = InstrRead(rsrcName(i))
    ' Continue to switch the resource until find a DG instrument
    strRet = UCase(strRet)
    j = InStr(strRet, "DG")
    If (j >= 0) Then
        bFindDG = True
        Exit For
    End If

    Call viFindNext(fList + i - 1, rsrcName(i))
Next i
'Dispaly
If (bFindDG = True) Then
    TxtInsAddr.Text = rsrcName(i)
Else
    TxtInsAddr.Text = ""
End If
End Sub

```

## 2) Write Operation

```

'Write the command to the instrument
Private Sub CmdWrite_Click()
    If (TxtInsAddr.Text = "") Then
        MsgBox ("Please write the instrument address ! ")

```

```
End If  
  
InstrWrite TxtInsAddr.Text, TxtCommand.Text  
End Sub
```

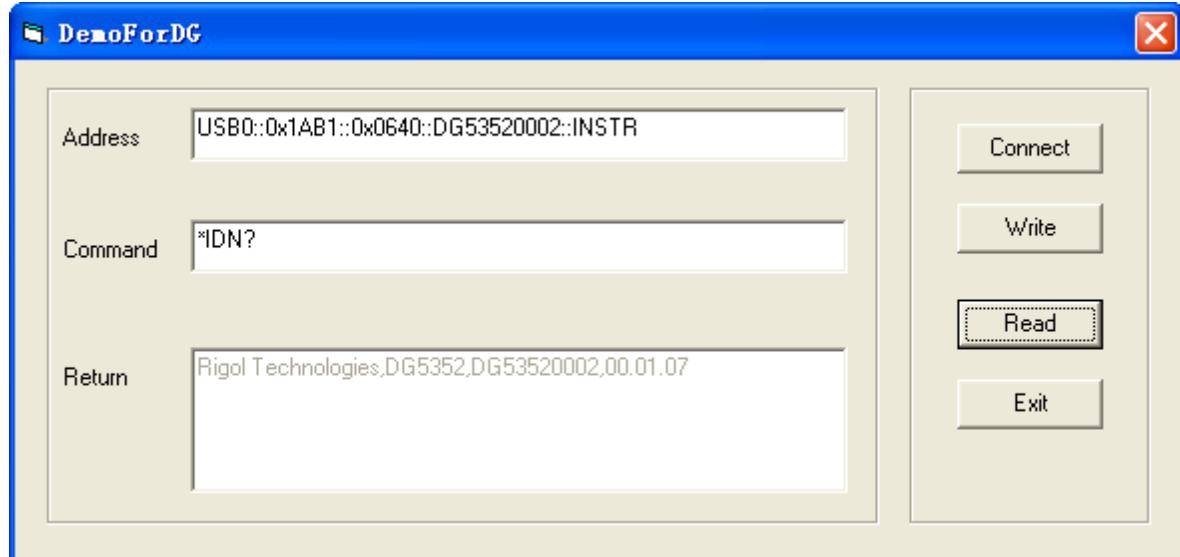

3) Read Operation  
'Read the return value from the instrument

```
Private Sub CmdRead_Click()  
    Dim strTemp As String  
    strTemp = InstrRead(TxtInsAddr.Text)  
    TxtReturn.Text = strTemp  
End Sub
```

**6.** Execution Result

- 1) Click "Connect" to search for the generator;
- 2) Input "\*IDN?" in the "Command" edit box;
- 3) Click "Write" to write the command into the generator;
- 4) Click "Read" to read the return value.

The execution result is as shown in the figure below.
